

FEDERAL OPERATING PERMIT

A FEDERAL OPERATING PERMIT IS HEREBY ISSUED TO
Phillips 66 Company

AUTHORIZING THE OPERATION OF
Borger Refinery
Petroleum Refineries

LOCATED AT
Hutchinson County, Texas
Latitude 35° 41' 50" Longitude 101° 22' 4"
Regulated Entity Number: RN102495884

This permit is issued in accordance with and subject to the Texas Clean Air Act (TCAA), Chapter 382 of the Texas Health and Safety Code and Title 30 Texas Administrative Code Chapter 122 (30 TAC Chapter 122), Federal Operating Permits. Under 30 TAC Chapter 122, this permit constitutes the permit holder's authority to operate the site and emission units listed in this permit. Operations of the site and emission units listed in this permit are subject to all additional rules or amended rules and orders of the Commission pursuant to the TCAA.

This permit does not relieve the permit holder from the responsibility of obtaining New Source Review authorization for new, modified, or existing facilities in accordance with 30 TAC Chapter 116, Control of Air Pollution by Permits for New Construction or Modification.

The site and emission units authorized by this permit shall be operated in accordance with 30 TAC Chapter 122, the general terms and conditions, special terms and conditions, and attachments contained herein.

This permit shall expire five years from the date of issuance. The renewal requirements specified in 30 TAC § 122.241 must be satisfied in order to renew the authorization to operate the site and emission units.

Permit No: O1440 Issuance Date: July 25, 2017

For the Commission

General Terms and Conditions

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

Special Terms and Conditions:

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

1. Permit holder shall comply with the following requirements:
 - A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.
 - B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.
 - C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.
 - D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.
 - E. Emission units subject to 40 CFR Part 63, Subpart G, CC, UUU, ZZZZ and DDDDD as identified in the attached Applicable Requirements Summary table are subject to 30 TAC

Chapter 113, Subchapter C, §113.120, §113.340, §113.780, §113.1090, and §113.1130, which incorporate the 40 CFR Part 63 Subparts by reference.

2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):
 - A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements
 - B. Title 30 TAC § 101.3 (relating to Circumvention)
 - C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ
 - D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ
 - E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)
 - F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)
 - G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)
 - H. Title 30 TAC § 101.221 (relating to Operational Requirements)
 - I. Title 30 TAC § 101.222 (relating to Demonstrations)
 - J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)
3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:
 - A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1, shall not exceed 20% opacity averaged over a six-minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:
 - (i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)
 - (ii) Title 30 TAC § 111.111(a)(1)(E)
 - (iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)
 - (iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that

does not obstruct the transmission of light. Vents, as specified in the “Applicable Requirements Summary” attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

- (1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.
- (2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.
- (3) Records of all observations shall be maintained.
- (4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.
- (5) Compliance Certification:
 - (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).
 - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is

determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

- (c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:

- (i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)
- (ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)
- (iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:
 - (1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the air emission source or enclosed facility is not operating for the entire quarter.
 - (2) Records of all observations shall be maintained.
 - (3) Visible emissions observations of air emission sources or enclosed facilities operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of air emission sources or enclosed facilities operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each emissions outlet in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each emissions outlet during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

- (4) Compliance Certification:
- (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(7) and (a)(7)(A)
 - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(7)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader

C. For visible emissions from all other sources not specified in 30 TAC § 111.111(a)(1), (4), or (7); the permit holder shall comply with the following requirements:

- (i) Title 30 TAC § 111.111(a)(8)(A) (relating to Requirements for Specified Sources)
- (ii) Title 30 TAC § 111.111(a)(8)(B)(i) or (ii)
- (iii) For a source subject to 30 TAC § 111.111(a)(8)(A), complying with 30 TAC § 111.111(a)(8)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:
 - (1) An observation of visible emissions from a source which is required to comply with 30 TAC § 111.111(a)(8)(A) shall be conducted at least once during each calendar quarter unless the source is not operating for the entire quarter.
 - (2) Records of all observations shall be maintained.
 - (3) Visible emissions observations of sources operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of sources operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each source in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each source during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer

visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

- (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(8) and (a)(8)(A)
- (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(8)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

- D. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.
- E. For emission units with contributions from uncombined water, the permit holder shall comply with the requirements of 30 TAC § 111.111(b).
- F. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:
 - (i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)
 - (ii) Sources with an effective stack height (h_e) less than the standard effective stack height (H_e), must reduce the allowable emission level by multiplying it by $[h_e/H_e]^2$ as required in 30 TAC § 111.151(b)
 - (iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)
- G. Outdoor burning, as stated in 30 TAC § 111.201, shall not be authorized unless the following requirements are satisfied:
 - (i) Title 30 TAC § 111.205 (relating to Exception for Fire Training)

- (ii) Title 30 TAC § 111.221 (relating to Responsibility for Consequences of Outdoor Burning)

- 4. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 60, unless otherwise stated in the applicable subpart:
 - A. Title 40 CFR § 60.7 (relating to Notification and Recordkeeping)
 - B. Title 40 CFR § 60.8 (relating to Performance Tests)
 - C. Title 40 CFR § 60.11 (relating to Compliance with Standards and Maintenance Requirements)
 - D. Title 40 CFR § 60.12 (relating to Circumvention)
 - E. Title 40 CFR § 60.13 (relating to Monitoring Requirements)
 - F. Title 40 CFR § 60.14 (relating to Modification)
 - G. Title 40 CFR § 60.15 (relating to Reconstruction)
 - H. Title 40 CFR § 60.19 (relating to General Notification and Reporting Requirements)
- 5. For petroleum refinery facilities subject to 40 CFR Part 60, Subpart QQQ, the permit holder shall comply with the following requirements:
 - A. Title 40 CFR § 60.692-1(a) - (c) (relating to Standards: General)
 - B. Title 40 CFR § 60.692-2(a) - (c), (e) (relating to Standards: Individual Drain Systems)
 - C. Title 40 CFR § 60.692-6(a) - (b) (relating to Standards: Delay of Repair)
 - D. Title 40 CFR § 60.692-7(a) - (b) (relating to Standards: Delay of Compliance)
 - E. Title 40 CFR § 60.693-1(a) - (d), (e)(1) - (3) (relating to Alternative Standards for Individual Drain Systems)
 - F. Title 40 CFR § 60.697(a), (b)(1) - (3) (relating to Recordkeeping Requirements), as applicable to Individual Drain Systems
 - G. Title 40 CFR § 60.697(f)(1) - (2), (g) (relating to Recordkeeping Requirements), as applicable to Individual Drain Systems
 - H. Title 40 CFR § 60.697(h) (relating to Recordkeeping Requirements), as applicable to excluded Stormwater Sewer Systems
 - I. Title 40 CFR § 60.697(i) (relating to Recordkeeping Requirements), as applicable to excluded Ancillary Equipment
 - J. Title 40 CFR § 60.697(j) (relating to Recordkeeping Requirements), as applicable to excluded Non-contact Cooling Water Systems
 - K. Title 40 CFR § 60.698(a), and (b)(1) (relating to Reporting Requirements), as applicable to Individual Drain Systems

- L. Title 40 CFR § 60.698(c) (relating to Reporting Requirements), for water seal breaches in Drain Systems
 - M. Title 40 CFR § 60.698(e) (relating to Reporting Requirements), as applicable to Individual Drain Systems
6. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 61, unless otherwise stated in the applicable subpart:
- A. Title 40 CFR § 61.05 (relating to Prohibited Activities)
 - B. Title 40 CFR § 61.07 (relating to Application for Approval of Construction or Modification)
 - C. Title 40 CFR § 61.09 (relating to Notification of Start-up)
 - D. Title 40 CFR § 61.10 (relating to Source Reporting and Request Waiver)
 - E. Title 40 CFR § 61.12 (relating to Compliance with Standards and Maintenance Requirements)
 - F. Title 40 CFR § 61.13 (relating to Emissions Tests and Waiver of Emission Tests)
 - G. Title 40 CFR § 61.14 (relating to Monitoring Requirements)
 - H. Title 40 CFR § 61.15 (relating to Modification)
 - I. Title 40 CFR § 61.19 (relating to Circumvention)
7. For facilities where total annual benzene quantity from waste is greater than or equal to 10 megagrams per year and subject to emission standards in 40 CFR Part 61, Subpart FF, the permit holder shall comply with the following requirements:
- A. Title 40 CFR § 61.342(c)(1)(i) - (iii) (relating to Standards: General)
 - B. Title 40 CFR § 61.342(e)(1) (relating to Standards: General)
 - C. Title 40 CFR § 61.342(e)(2)(i) - (ii) (relating to Standards: General)
 - D. Title 40 CFR § 61.342(g) (relating to Standards: General)
 - E. Title 40 CFR § 61.350(a) and (b) (relating to Standards: Delay of Repair)
 - F. Title 40 CFR § 61.355(a)(1)(iii), (a)(2), (a)(6), (b), and (c)(1) - (3) (relating to Test Methods, Procedures, and Compliance Provisions)
 - G. Title 40 CFR § 61.355(k)(1) - (6), and (7)(i) - (iv) (relating to Test Methods, Procedures, and Compliance Provisions), for calculation procedures
 - H. Title 40 CFR § 61.356(a) (relating to Recordkeeping Requirements)
 - I. Title 40 CFR § 61.356(b), and (b)(1) (relating to Recordkeeping Requirements)
 - J. Title 40 CFR § 61.356(b)(4) (relating to Recordkeeping Requirements)
 - K. Title 40 CFR § 61.356(b)(5) (relating to Recordkeeping Requirements)

- L. Title 40 CFR § 61.357(a), (d)(1), (d)(2) (d)(6) and (d)(8) (relating to Reporting Requirements)
 - M. Title 40 CFR § 61.357(d)(5) (relating to Reporting Requirements)
8. For facilities with containers subject to emission standards in 40 CFR Part 61, Subpart FF, the permit holder shall comply with the following requirements:
- A. Title 40 CFR § 61.345(a)(1) - (3), (b), and (c) (relating to Standards: Containers)
 - B. Title 40 CFR § 61.355(h) (relating to Test Methods, Procedures and Compliance Provisions)
 - C. Title 40 CFR § 61.356(g) (relating to Recordkeeping Requirements)
 - D. Title 40 CFR § 61.356(h) (relating to Recordkeeping Requirements)
9. For facilities with individual drain systems subject to emission standards in 40 CFR Part 61, Subpart FF, the permit holder shall comply with the following requirements:
- A. Title 40 CFR § 61.346(b)(1), (2), (2)(i), (3), (4)(i) - (iv), and (5) (relating to Standards: Individual Drain Systems)
 - B. Title 40 CFR § 61.346(b)(2)(ii)(A) (relating to Standards: Individual Drain Systems), for junction boxes
10. The permit holder shall comply with the requirements of 30 TAC Chapter 113, Subchapter C, § 113.100 for units subject to any subpart of 40 CFR Part 63, unless otherwise stated in the applicable subpart.
11. For the chemical manufacturing process specified in 40 CFR Part 63, Subpart F, the permit holder shall comply with 40 CFR § 63.103(a) (relating to General Compliance, Reporting, and Recordkeeping Provisions) (Title 30 TAC Chapter 113, Subchapter C, § 113.110 incorporated by reference).
12. For the chemical manufacturing facilities subject to transfer operations requirements in 40 CFR Part 63, Subpart G, the permit holder shall comply with the following requirements (Title 30 TAC Chapter 113, Subchapter C, § 113.120 incorporated by reference):
- A. Title 40 CFR § 63.126(e)(1) - (2), and (f) (relating to Transfer Operations Provisions Reference Control Technology)
 - B. Title 40 CFR § 63.128(f)(1) - (2) (relating to Transfer Operations Provisions - Test Methods and Procedures)
 - C. Title 40 CFR § 63.130(e) (relating to Transfer Operations Provisions - Periodic Recordkeeping and Reporting)
13. For sources subject to emission standards in 40 CFR Part 63, Subpart CC, the permit holder shall comply with the following requirements (Title 30 TAC Chapter 113, Subchapter C, § 113.340 incorporated by reference):
- A. Title 40 CFR § 63.640(l)(3) - (4) (relating to Applicability and Designation of Affected Source), for units and equipment added to an existing source

- B. Title 40 CFR § 63.640(m)(1) - (2) (relating to Applicability and Designation of Affected Source), for units and emission points changing from Group 2 to Group 1 status
 - C. Title 40 CFR § 63.642(c) (relating to General Standards), for applicability of the General Provisions of Subpart A
 - D. Title 40 CFR § 63.642(e) (relating to General Standards), for recordkeeping
 - E. Title 40 CFR § 63.642(f) (relating to General Standards), for reporting
 - F. Group 1 process wastewater streams not managed in a wastewater management unit subject to 40 CFR Part 63, Subpart G shall comply with 40 CFR Part 61, Subpart FF as specified in 40 CFR §§ 63.647(a) - (c) and 63.655(a)
14. The permit holder shall comply with the requirement to prepare and implement an Operations and Maintenance plan in accordance with 40 CFR Part 63, Subpart UUU, § 63.1574(f) (Title 30 TAC Chapter 113, Subchapter C, § 113.780 incorporated by reference).

Additional Monitoring Requirements

15. Unless otherwise specified, the permit holder shall comply with the compliance assurance monitoring requirements as specified in the attached "CAM Summary" upon issuance of the permit. In addition, the permit holder shall comply with the following:
- A. The permit holder shall comply with the terms and conditions contained in 30 TAC § 122.147 (General Terms and Conditions for Compliance Assurance Monitoring).
 - B. The permit holder shall report, consistent with the averaging time identified in the "CAM Summary," deviations as defined by the deviation limit in the "CAM Summary." Any monitoring data below a minimum limit or above a maximum limit, that is collected in accordance with the requirements specified in 40 CFR § 64.7(c), shall be reported as a deviation. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).
 - C. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time specified in the "CAM Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances in order to avoid reporting deviations. All monitoring data shall be collected in accordance with the requirements specified in 40 CFR § 64.7(c).
 - D. The permit holder shall operate the monitoring, identified in the attached "CAM Summary," in accordance with the provisions of 40 CFR § 64.7.
 - E. The permit holder shall comply with the requirements of 40 CFR § 70.6(a)(3)(ii)(A) and 30 TAC § 122.144(1)(A)-(F) for documentation of all required inspections.
16. The permit holder shall comply with the periodic monitoring requirements as specified in the attached "Periodic Monitoring Summary" upon issuance of the permit. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permit holder shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent

with the averaging time specified in the "Periodic Monitoring Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

New Source Review Authorization Requirements

17. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule, standard permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating Facility Permits issued under 30 TAC Chapter 116, Subchapter I referenced in the New Source Review Authorization References attachment. These requirements:
 - A. Are incorporated by reference into this permit as applicable requirements
 - B. Shall be located with this operating permit
 - C. Are not eligible for a permit shield
18. The permit holder shall comply with the general requirements of 30 TAC Chapter 106, Subchapter A or the general requirements, if any, in effect at the time of the claim of any PBR.
19. The permit holder shall maintain records to demonstrate compliance with any emission limitation or standard that is specified in a permit by rule (PBR) or Standard Permit listed in the New Source Review Authorizations attachment. The records shall yield reliable data from the relevant time period that are representative of the emission unit's compliance with the PBR or Standard Permit. These records may include, but are not limited to, production capacity and throughput, hours of operation, safety data sheets (SDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, direct pollutant monitoring (CEMS, COMS, or PEMS), or control device parametric monitoring. These records shall be made readily accessible and available as required by 30 TAC § 122.144. Any monitoring or recordkeeping data indicating noncompliance with the PBR or Standard Permit shall be considered and reported as a deviation according to 30 TAC § 122.145 (Reporting Terms and Conditions).
20. The permit holder shall comply with the following requirements for Air Quality Standard Permits:
 - A. Registration requirements listed in 30 TAC § 116.611, unless otherwise provided for in an Air Quality Standard Permit
 - B. General Conditions listed in 30 TAC § 116.615, unless otherwise provided for in an Air Quality Standard Permit
 - C. Applicable requirements of 30 TAC § 116.617 for Pollution Control Projects based on the information contained in the registration application.
21. The permit holder shall comply with the following requirements for flexible permits of 30 TAC Chapter 116:
 - A. Title 30 TAC § 116.715 (relating to General and Special Conditions)
 - B. Title 30 TAC § 116.716 (relating to Emission Caps and Individual Emission Limitations)

- C. Title 30 TAC § 116.717 (relating to Implementation Schedule for Additional Controls)
- D. Title 30 TAC § 116.718 (relating to Significant Emission Increase)
- E. Title 30 TAC § 116.720 (relating to Limitation on Physical and Operational Changes)
- F. Title 30 TAC § 116.721(a) (relating to requirements for Amendments and Alterations)

Compliance Requirements

- 22. The permit holder shall certify compliance in accordance with 30 TAC § 122.146. The permit holder shall comply with 30 TAC § 122.146 using at a minimum, but not limited to, the continuous or intermittent compliance method data from monitoring, recordkeeping, reporting, or testing required by the permit and any other credible evidence or information. The certification period may not exceed 12 months and the certification must be submitted within 30 days after the end of the period being certified.
- 23. Use of Discrete Emission Credits to comply with the applicable requirements:
 - A. Unless otherwise prohibited, the permit holder may use discrete emission credits to comply with the following applicable requirements listed elsewhere in this permit:
 - (i) Title 30 TAC Chapter 115
 - (ii) Title 30 TAC Chapter 117
 - (iii) If applicable, offsets for Title 30 TAC Chapter 116
 - (iv) Temporarily exceed state NSR permit allowables
 - B. The permit holder shall comply with the following requirements in order to use the credit to comply with the applicable requirements:
 - (i) The permit holder must notify the TCEQ according to 30 TAC § 101.376(d)
 - (ii) The discrete emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 4
 - (iii) The executive director has approved the use of the discrete emission credits according to 30 TAC § 101.376(d)(1)(A)
 - (iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.372(h) and 30 TAC Chapter 122
 - (v) Title 30 TAC § 101.375 (relating to Emission Reductions Achieved Outside the United States)

Risk Management Plan

- 24. For processes subject to 40 CFR Part 68 and specified in 40 CFR § 68.10, the permit holder shall comply with the requirements of the Accidental Release Prevention Provisions in 40 CFR Part 68. The permit holder shall submit to the appropriate agency either a compliance schedule for meeting the requirements of 40 CFR Part 68 by the date provided in 40 CFR § 68.10(a), or as

part of the compliance certification submitted under this permit, a certification statement that the source is in compliance with all requirements of 40 CFR Part 68, including the registration and submission of a risk management plan.

Protection of Stratospheric Ozone

25. Permit holders at a site subject to Title VI of the FCAA Amendments shall meet the following requirements for protection of stratospheric ozone:
 - A. Any on site servicing, maintenance, and repair on refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants or non-exempt substitutes shall be conducted in accordance with 40 CFR Part 82, Subpart F. Permit holders shall ensure that repairs on or refrigerant removal from refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants are performed only by properly certified technicians using certified equipment. Records shall be maintained as required by 40 CFR Part 82, Subpart F.
 - B. The permit holder shall comply with 40 CFR Part 82, Subpart H related to Halon Emissions Reduction requirements as specified in 40 CFR § 82.250 - § 82.270 and the applicable Part 82 Appendices.

Permit Location

26. The permit holder shall maintain a copy of this permit and records related to requirements listed in this permit on site.

Permit Shield (30 TAC § 122.148)

27. A permit shield is granted for the emission units, groups, or processes specified in the attached "Permit Shield." Compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements listed in the attachment "Permit Shield." Permit shield provisions shall not be modified by the executive director until notification is provided to the permit holder. No later than 90 days after notification of a change in a determination made by the executive director, the permit holder shall apply for the appropriate permit revision to reflect the new determination. Provisional terms are not eligible for this permit shield. Any term or condition, under a permit shield, shall not be protected by the permit shield if it is replaced by a provisional term or condition or the basis of the term and condition changes.

Applicable Requirements Summary	35
--	-----------

Note: A “none” entry may be noted for some emission sources in this permit’s “Applicable Requirements Summary” under the heading of “Monitoring and Testing Requirements” and/or “Recordkeeping Requirements” and/or “Reporting Requirements.” Such a notation indicates that there are no requirements for the indicated emission source as identified under the respective column heading(s) for the stated portion of the regulation when the emission source is operating under the conditions of the specified SOP Index Number. However, other relevant requirements pursuant to 30 TAC Chapter 122 including Recordkeeping Terms and Conditions (30 TAC § 122.144), Reporting Terms and Conditions (30 TAC § 122.145), and Compliance Certification Terms and Conditions (30 TAC § 122.146) continue to apply.

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: 25V1	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: R1111-B
Pollutant: Opacity	Main Standard: § 111.111(a)(1)(B)
Monitoring Information	
Indicator: Visible emissions	
Minimum Frequency: Once per quarter	
Averaging Period: n/a	
Deviation Limit: Maximum opacity = 20%	
<p>Periodic Monitoring Text: Visible emissions observations shall be made and recorded during each calendar quarter unless the emission unit is not operating for the entire quarter. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emission observations. If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If a Test Method 9 is performed, the opacity limit is the corresponding opacity limit associated with the particulate matter standard in the underlying applicable requirement. If there is no corresponding opacity limit in the underlying applicable requirement, the maximum opacity will be established using the most recent performance test. If the result of the Test Method 9 is opacity above the corresponding opacity limit (associated with the particulate matter standard in the underlying applicable requirement or as identified as a result of a previous performance test to establish the maximum opacity limit), the permit holder shall report a deviation.</p>

Permit Shield

Permit Shield	191
----------------------------	------------

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
0111	N/A	40 CFR Part 63, Subpart G	Sources are not subject to 40 CFR 63, Subpart F.
0111	N/A	40 CFR Part 63, Subpart OO	Tank is not subject to another subpart within 40 CFR 60, 61, or 63 that references the use of subpart OO for air emission control.
0202	N/A	40 CFR Part 63, Subpart G	Sources are not subject to 40 CFR 63, Subpart F.
0202	N/A	40 CFR Part 63, Subpart OO	Tank is not subject to another subpart within 40 CFR 60, 61, or 63 that references the use of subpart OO for air emission control.
0401	N/A	40 CFR Part 63, Subpart CC	CC and Kb tanks only have to comply with Kb regulations.
0401	N/A	40 CFR Part 63, Subpart G	Sources are not subject to 40 CFR 63, Subpart F.
0401	N/A	40 CFR Part 63, Subpart OO	Tank is not subject to another subpart within 40 CFR 60, 61, or 63 that references the use of subpart OO for air emission control.
1025	N/A	40 CFR Part 60, Subpart QQQ	Group 1 wastewater tank is complying with 40 CFR Part 63, Subpart CC.
1165	N/A	40 CFR Part 63, Subpart G	Sources are not subject to 40 CFR 63, Subpart F.
1165	N/A	40 CFR Part 63, Subpart OO	Tank is not subject to another subpart within 40 CFR 60, 61, or 63 that references the use of subpart OO for air emission control.
2510	N/A	40 CFR Part 63, Subpart G	Sources are not subject to 40 CFR 63, Subpart

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
			F.
2510	N/A	40 CFR Part 63, Subpart OO	Tank is not subject to another subpart within 40 CFR 60, 61, or 63 that references the use of subpart OO for air emission control.
2510	N/A	40 CFR Part 63, Subpart R	Refinery complying with 40 CFR Part 63, Subpart CC is not subject to Subpart R standards for storage vessels.
2673	N/A	40 CFR Part 60, Subpart QQQ	Group 1 wastewater tank is complying with 40 CFR Part 63, Subpart CC.
2673	N/A	40 CFR Part 63, Subpart G	Sources are not subject to 40 CFR 63, Subpart F.
2673	N/A	40 CFR Part 63, Subpart OO	Tank is not subject to another subpart within 40 CFR 60, 61, or 63 that references the use of subpart OO for air emission control.
3001	N/A	40 CFR Part 63, Subpart OO	Tank is not subject to another subpart within 40 CFR 60, 61, or 63 that references the use of subpart OO for air emission control.
3002	N/A	40 CFR Part 63, Subpart OO	Tank is not subject to another subpart within 40 CFR 60, 61, or 63 that references the use of subpart OO for air emission control.
3003	N/A	40 CFR Part 63, Subpart CC	CC and Kb tanks only have to comply with Kb regulations.
3003	N/A	40 CFR Part 63, Subpart G	Sources are not subject to 40 CFR 63, Subpart F.
3003	N/A	40 CFR Part 63, Subpart OO	Tank is not subject to another subpart within

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
			40 CFR 60, 61, or 63 that references the use of subpart OO for air emission control.
8001	N/A	40 CFR Part 63, Subpart G	Sources are not subject to 40 CFR 63, Subpart F.
8001	N/A	40 CFR Part 63, Subpart OO	Tank is not subject to another subpart within 40 CFR 60, 61, or 63 that references the use of subpart OO for air emission control.
81B17	N/A	40 CFR Part 60, Subpart Dc	The maximum design capacity is > 100 MMBtu/hr
93E1	N/A	40 CFR Part 63, Subpart ZZZZ	Existing spark ignition 2SLB stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions.
93E2	N/A	40 CFR Part 63, Subpart ZZZZ	Existing spark ignition 2SLB stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions.
98H1	N/A	40 CFR Part 60, Subpart J	Heater uses only purchased natural gas.
D011	N/A	40 CFR Part 63, Subpart G	Sources are not subject to 40 CFR 63, Subpart F.
D011	N/A	40 CFR Part 63, Subpart OO	Tank is not subject to another subpart within 40 CFR 60, 61, or 63 that references the use of subpart OO for air emission control.
F-11	N/A	40 CFR Part 60, Subpart GGG	Equipment leaks that are subject to 40 CFR Part 63, Subpart CC are not required to comply with any standards of Parts 60 and 61 which were promulgated before September 4, 2007.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
F-11	N/A	40 CFR Part 60, Subpart KKK	Equipment leaks that are subject to 40 CFR Part 63, subpart CC are not required to comply with any standards of Part 60 and 61 which were promulgated before September 4, 2007.
F-11	N/A	40 CFR Part 60, Subpart VV	Doesn't produce an applicable chemical.
F-11	N/A	40 CFR Part 63, Subpart H	Does not contain equipment listed in 63.160(a).
F-11	N/A	40 CFR Part 63, Subpart HH	The emission points are not located at an oil and gas production facility.
F-11	N/A	40 CFR Part 63, Subpart I	The fugitive unit does not contain one of the processes listed in 40 CFR 63.190(b)(1) - (6).
F-13	N/A	40 CFR Part 60, Subpart VV	Doesn't produce an applicable chemical.
F-13	N/A	40 CFR Part 63, Subpart H	Does not contain equipment listed in 63.160(a).
F-1-6-PB	N/A	40 CFR Part 60, Subpart GGG	Equipment leaks that are subject to 40 CFR Part 63, subpart CC are not required to comply with any standards of Part 60 and 61 which were promulgated before September 4, 2007.
F-1-7OLD	N/A	40 CFR Part 60, Subpart VV	Doesn't produce an applicable chemical.
F-1-7OLD	N/A	40 CFR Part 63, Subpart H	Does not contain equipment listed in 63.160(a).
F-19-1	N/A	40 CFR Part 60, Subpart GGG	Affected facilities were reconstructed/modified after November 7, 2006.
F-19-1	N/A	40 CFR Part 60, Subpart KKK	Equipment leaks that are subject to 40 CFR Part 63, Subpart CC are not required to comply

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
			with any standards of Parts 60 and 61 which were promulgated before September 4, 2007.
F-19-1	N/A	40 CFR Part 60, Subpart VV	Doesn't produce an applicable chemical.
F-19-1	N/A	40 CFR Part 63, Subpart H	Does not contain equipment listed in 63.160(a).
F-19-1	N/A	40 CFR Part 63, Subpart HH	The emission points are not located at an oil and gas production facility.
F-19-1	N/A	40 CFR Part 63, Subpart I	The fugitive unit does not contain one of the processes listed in 40 CFR 63.190(b)(1) - (6).
F-19-2	N/A	40 CFR Part 60, Subpart GGG	Affected facilities were reconstructed/modified after November 7, 2006.

GRP-TANK	8035, 8036, 9400, 9401	40 CFR Part 61, Subpart FF	Tank doesn't manage, treat, or store a waste stream subject to 40 CFR Part 61 Subpart FF.
GRP-TANK	8035, 8036, 9400, 9401	40 CFR Part 63, Subpart G	Sources are not subject to 40 CFR 63, Subpart F.
GRP-TANK	8035, 8036, 9400, 9401	40 CFR Part 63, Subpart OO	Tank is not subject to another subpart within 40 CFR 60, 61, or 63 that references the use of subpart OO for air emission control.
SKIDBLR	N/A	40 CFR Part 60, Subpart Dc	The maximum design capacity is > 100 MMBtu/hr.
SKIDBLRFUG	N/A	40 CFR Part 60, Subpart GGG	Affected facilities were constructed after November 7, 2006.
SKIDBLRFUG	N/A	40 CFR Part 60, Subpart KKK	The facility is not in an onshore natural gas processing plant.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
SKIDBLRFUG	N/A	40 CFR Part 63, Subpart H	Does not contain equipment listed in 63.160(a)
SKIDBLRFUG	N/A	40 CFR Part 63, Subpart HH	The emission points are not located at an oil and gas production facility.
SKIDBLRFUG	N/A	40 CFR Part 63, Subpart I	The fugitive unit does not contain one of the processes listed in 40 CFR 63.190(b)(1) - (6).
TK2530	N/A	40 CFR Part 60, Subpart Kb	Storage vessels with a capacity greater than or equal to 40,000 gallons storing a liquid with a maximum true vapor pressure less than 3.5 kPa are exempt from the provisions of this subpart.
VD114	N/A	40 CFR Part 63, Subpart G	Sources are not subject to 40 CFR 63, Subpart F.
VD114	N/A	40 CFR Part 63, Subpart OO	Tank is not subject to another subpart within 40 CFR 60, 61, or 63 that references the use of subpart OO for air emission control.

Acronym List 227

Acronym List

The following abbreviations or acronyms may be used in this permit:

ACFM	actual cubic feet per minute
AMOC	alternate means of control
ARP	Acid Rain Program
ASTM	American Society of Testing and Materials
B/PA	Beaumont/Port Arthur (nonattainment area)
CAM	Compliance Assurance Monitoring
CD	control device
COMS	continuous opacity monitoring system
CVS	closed-vent system
D/FW	Dallas/Fort Worth (nonattainment area)
DR	Designated Representative
EIP	El Paso (nonattainment area)
EP	emission point
EPA	U.S. Environmental Protection Agency
EU	emission unit
FCAA Amendments	Federal Clean Air Act Amendments
FOP	federal operating permit
GF	grandfathered
gr/100 scf	grains per 100 standard cubic feet
HAP	hazardous air pollutant
H/G/B	Houston/Galveston/Brazoria (nonattainment area)
H ₂ S	hydrogen sulfide
ID No.	identification number
lb/hr	pound(s) per hour
MMBtu/hr	Million British thermal units per hour
MRRT	monitoring, recordkeeping, reporting, and testing
NA	nonattainment
N/A	not applicable
NADB	National Allowance Data Base
NO _x	nitrogen oxides
NSPS	New Source Performance Standard (40 CFR Part 60)
NSR	New Source Review
ORIS	Office of Regulatory Information Systems
Pb	lead
PBR	Permit By Rule
PM	particulate matter
ppmv	parts per million by volume
PSD	prevention of significant deterioration
RO	Responsible Official
SO ₂	sulfur dioxide
TCEQ	Texas Commission on Environmental Quality
TSP	total suspended particulate
TVP	true vapor pressure
U.S.C.	United States Code
VOC	volatile organic compound

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources, use area name or fugitive source name.
- (3)

VOC	- volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1
NO _x	- total oxides of nitrogen
SO ₂	- sulfur dioxide
PM	- total particulate matter, suspended in the atmosphere, including PM ₁₀ and PM _{2.5} , as represented
PM ₁₀	- total particulate matter equal to or less than 10 microns in diameter, including PM _{2.5} , as represented
PM _{2.5}	- particulate matter equal to or less than 2.5 microns in diameter
CO	- carbon monoxide
NH ₃	- ammonia
Cl ₂	- chlorine
H ₂ S	- hydrogen sulfide
HCl	- hydrogen chloride
HF	- hydrogen fluoride
- (4) Compliance with annual emission limits (tons per year) is based on a 12 month rolling period.
- (5) Emission rate is an estimate and is enforceable through compliance with the applicable special condition(s) and permit application representations.
- (6) Interim rates are in effect until the Unit 34 Degassing System is installed and functioning, or until December 31, 2020. Final rates shall take effect after December 31, 2020.

Texas Commission on Environmental Quality Air Quality Permit

A Flexible Permit Is Hereby Issued To
PHILLIPS 66 COMPANY
Authorizing the Construction and Operation of
Borger Refinery
Located at Borger, Hutchinson County, Texas
Latitude 35° 42' 0" Longitude -101° 21' 60"

Permit: 9868A

Revision Date: August 24, 2018

Expiration Date: November 22, 2015

For the Commission

1. **Facilities** covered by this permit shall be constructed and operated as specified in the application for the permit. All representations regarding construction plans and operation procedures contained in the permit application shall be conditions upon which the permit is issued. Variations from these representations shall be unlawful unless the permit holder first makes application to the Texas Commission on Environmental Quality (commission) Executive Director to amend this permit in that regard and such amendment is approved. It shall be unlawful for any person to vary from such representation or flexible permit provision if the change will cause a change in the method of control of emissions, the character of the emissions, will relax emission controls or will result in a significant increase in emissions, unless application is made to the executive director to amend the flexible permit in that regard and such amendment is approved by the executive director. [Title 30 Texas Administrative Code (TAC) Sections 116.715(c)(8) and 116.721 (30 TAC § 116.721)] ¹
2. **Voiding of Permit.** A permit or permit amendment is automatically void if the holder fails to begin construction within 18 months of the date of issuance, discontinues construction for more than 18 months prior to completion, or fails to complete construction within a reasonable time. Upon request, the executive director may grant an 18-month extension. Before the extension is granted the permit may be subject to revision based on best available control technology, lowest achievable emission rate, and netting or offsets as applicable. One additional extension of up to 18 months may be granted if the permit holder demonstrates that emissions from the facility will comply with all rules and regulations of the commission, the intent of the Texas Clean Air Act (TCAA), including protection of the public's health and physical property; and (b)(1) the permit holder is a party to litigation not of the permit holder's initiation regarding the issuance of the permit; or (b)(2) the permit holder has spent, or committed to spend, at least 10 percent of the estimated total cost of the project up to a maximum of \$5 million. A permit holder granted an extension under subsection (b)(1) of this section may receive one subsequent extension if the permit holder meets the conditions of subsection (b)(2) of this section. [30 TAC § 116.120]
3. **Construction Progress.** Start of construction, construction interruptions exceeding 45 days, and completion of construction shall be reported to the appropriate regional office of the commission not later than 15 working days after occurrence of the event. [30 TAC § 116.715(c)(2)]
4. **Start-up Notification.** The appropriate air program regional office shall be notified prior to the commencement of operations of the facilities authorized by the permit in such a manner that a representative of the commission may be present. The permit holder shall provide a separate notification for the commencement of operations for each unit of phased construction, which may involve a series of units commencing operations at different times. Prior to operation of the facilities authorized by the permit, the permit holder shall identify the source or sources of allowances to be utilized for compliance with Chapter 101, Subchapter H, Division 3 of this title (relating to Mass Emissions Cap and Trade Program). [30 TAC § 116.715(c)(3)]
5. **Sampling Requirements.** If sampling is required, the flexible permit holder shall contact the commission's Office of Compliance and Enforcement prior to sampling to obtain the proper data forms and procedures. All sampling and testing procedures must be approved by the executive director and coordinated with the regional representatives of the commission. The flexible permit holder is also responsible for providing sampling facilities and conducting the sampling operations or contracting with an independent sampling consultant. [30 TAC § 116.715(c)(4)]
6. **Equivalency of Methods.** The permit holder must demonstrate or otherwise justify the equivalency of emission control methods, sampling or other emission testing methods, and monitoring methods proposed as alternatives to

methods indicated in the conditions of the permit. Alternative methods shall be applied for in writing and must be reviewed and approved by the executive director prior to their use in fulfilling any requirements of the permit. [30 TAC § 116.715(c)(5)]

7. **Recordkeeping.** A copy of the flexible permit along with information and data sufficient to demonstrate continuous compliance with the emission caps and individual emission limitations contained in the flexible permit shall be maintained in a file at the plant site and made available at the request of personnel from the commission or any air pollution control program having jurisdiction. This information shall include, but is not limited to, emission cap and individual emission limitation calculations based on a 12-month rolling basis; emission cap and individual emission limitation calculations corresponding to any short term emission limitation; production records and operating hours; and additional recordkeeping requirements specified in special conditions attached to the flexible permit. Information in the file shall be retained for at least two years following the date that the information or data is obtained. For facilities that normally operate unattended, this information shall be maintained at the nearest staffed location within Texas specified by the permit holder in the permit application. [30 TAC § 116.715(c)(6)]
8. **Maximum Allowable Emission Rates**A flexible permit covers only those sources of emissions and those air contaminants listed in the table entitled "Emission Sources, Emissions Caps and Individual Emission Limitations" in the flexible permit. Each permitted facility, group of facilities or account is limited to the emission limits and other conditions specified in the table in the flexible permit. [30 TAC § 116.715(c)(7)] ¹
9. **Emission Cap Readjustment.** If a schedule to install additional controls is included in the flexible permit and a facility subject to such a schedule is taken out of service, the emission cap contained in the flexible permit will be readjusted for the period the unit is out of service to a level as if no schedule had been established. Unless a special condition specifies the method of readjustment of the emission cap, a permit alteration shall be obtained. [30 TAC § 116.715(c)(9)]
10. **Maintenance of Emission Control.** The permitted facilities shall not be operated unless all air pollution emission capture and abatement equipment is maintained in good working order and operating properly during normal facility operations. The flexible permit holder shall provide notification in accordance with 30 TAC §101.201, 101.211, and 101.221 of this title (relating to Emissions Event Reporting and Recordkeeping Requirements; Scheduled Maintenance, Startup, and Shutdown Reporting and Recordkeeping Requirements; and Operational Requirements). [30 TAC § 116.715(c)]
11. **Compliance with Rules.** Acceptance of a flexible permit by an applicant constitutes an acknowledgment and agreement that the flexible permit holder will comply with all rules and orders of the commission issued in conformity with the TCAA and the conditions precedent to the granting of the permit. If more than one state or federal rule or regulation or permit condition is applicable, the most stringent limit or condition shall govern and be the standard by which compliance shall be demonstrated. Acceptance includes consent to the entrance of commission employees and agents into the permitted premises at reasonable times to investigate conditions relating to the emission or concentration of air contaminants, including compliance with the flexible permit. [30 TAC § 116.715(c)(11)]
12. **This** permit may not be transferred, assigned, or conveyed by the holder except as provided by rule. [30 TAC § 116.110(e)]
13. **There** may be additional special conditions attached to a permit upon issuance or modification of the permit. Such conditions in a permit may be more restrictive than the requirements of Title 30 of the Texas Administrative Code. [30 TAC § 116.715(d)]
14. **Emissions** from this facility must not cause or contribute to "air pollution" as defined in Texas Health and Safety Code (THSC) §382.003(3) or violate THSC § 382.085. If the executive director determines that such a condition or violation occurs, the holder shall implement additional abatement measures as necessary to control or prevent the condition or violation.
15. **The** permit holder shall comply with all the requirements of this permit. Emissions that exceed the limits of this permit are not authorized and are violations of this permit. ¹

¹ Please be advised that the requirements of this provision of the general conditions may not be applicable to greenhouse gas emissions.

Special Conditions

Flexible Permit Numbers 9868A and PSDTX102M7

Emission Caps and Individual Limitations

1. This permit authorizes emissions only from those points listed in the attached table entitled "Emission Sources - Maximum Allowable Emission Rates," and the facilities covered by this permit are authorized to emit subject to the emission rate limits on that table and other operating conditions specified in this permit. **(5/03)** The sources listed in Attachment A are authorized either by Permit by Rule (PBR) in Title 30 Texas Administrative Code Chapter 106 (30 TAC 106) or by Standard Permit (SP) in Title 30 Texas Administrative Code Chapter 116, Subchapter F (30 TAC 116, Subchapter F). **(09/13)**

Operational Parameters

2. Flares shall be designed and operated in accordance with the following requirements:
 - A. The combined refinery fuel natural gas and waste stream to the flare shall meet the Title 40 Code of Federal Regulations § 60.18 (40 CFR § 60.18) specifications of minimum heating value and maximum tip velocity under normal, upset, and maintenance flow conditions. Compliance with this condition shall be demonstrated by monitoring required in Section D below. Flare testing per 40 CFR § 60.18(f) may be requested by the Texas Commission on Environmental Quality (TCEQ) Regional Office, in addition to New Source Performance Standards (NSPS) or federal requirements, to demonstrate compliance with this condition.
 - B. The flare(s) shall be operated with a flame present at all times, have a constant pilot flame, or have an automatic reignition system. The pilot flame shall be monitored by a thermocouple, an infrared monitor, or equivalent device as defined by 40 CFR § 60.18 and 40 CFR § 63.11. The time, date, and duration of any loss of pilot flame shall be recorded. Each monitoring device shall be accurate to, and shall be calibrated at, a frequency in accordance with the manufacturer's specifications. **(11/05)**
 - C. The flares shall be operated with no visible emissions except periods not to exceed a total of five minutes during any two consecutive hours. This shall be ensured by the use of steam assist to the flare (for steam-assisted flares).
 - D. The holder of this permit shall install a continuous flow monitor on Flare Emission Point Nos. (EPNs) 66FL1, 66FL2, 66FL3, 66FL4, 66FL6, and 66FL12 that provides a record of the vent stream flow to each flare. The flow monitor sensors should be installed in the vent stream such that the total vent stream to the flare is measured. The average hourly values of the flow shall be recorded and maintained electronically. The holder of this permit shall record the daily average flow rate (24-hour average) to each flare and the hourly average during upset conditions. Records of the flows shall be maintained for a period of two years and be made available to the Executive Director of the TCEQ upon request. **(05/08)**

The continuous flow monitor shall operate as required by this section at least 95 percent of the time when the flare is operational, averaged over a rolling 12-month period. **(11/05)**

The holder of this permit shall conduct an analysis (grab sample) of the flare composition (total volatile organic compounds [VOC], hydrogen sulfide [H₂S], and Btu content) on a semiannual basis (once during the summer months and once during the winter months). The sampling shall be conducted such that the total vent stream to the flare is included in the analysis. Records of the grab sampling results shall be maintained for a period of five years and made available to representatives of the TCEQ upon request. **(04/05)**

Contingency Plan for Sulfur Recovery Unit (SRU) Complex

3. Should there be a loss of sulfur recovery potential from the claus trains, tail gas treating unit (TGTU) front-ends, TGTU back-end, or tail gas incinerators (TGIs), the following step shall be taken immediately (not to exceed eight hours) from the start of the event: The acid gas shall be rerouted to the operating backup equipment at the remaining sulfur recovery trains. (PSD) **(05/03)**
4. The SRU 43 and SRU 34 shall be capable of routing acid gas from one SRU to the other. (PSD)
5. All acid gas streams from the amine regeneration units containing H₂S shall be routed to the SRUs or other process units. (PSD) **(05/03)**
6. The acid gas exiting the waste heat boilers shall be sampled for ammonia (NH₃) on a monthly basis, and the NH₃ concentration shall not exceed 300 parts per million by volume (ppmv) at any time. Drager tubes or another sampling method, as approved by the TCEQ, shall be used to sample for NH₃.

Records of the sampling time, date, and sampling results shall be maintained for a period of three years and made available to representatives of the TCEQ upon request. The sampling results shall be in terms of ppmv. This condition does not become effective for SRU 34 until the sour water stripper (or NH₃ stripper) overheads are tied into SRU 34. (PSD) **(03/00)**

7. The following shall apply to sour water stripper systems:
 - A. During routine operations, sour water stripper systems "A" and "B" shall process only sour water from Units 41, 42, 43, 44, 45, and 50. By design, these units produce sour water generally containing hydrocarbons with ten or fewer carbons and no more than 2 percent hydrocarbons with 12 or more carbons. A hydrocarbon sensor shall be operated to detect the presence of hydrocarbon in the sour water being processed at Unit 42. Additionally, a hydrocarbon detector shall be operated in the Unit 44 sour water feed drums to produce an alarm when hydrocarbon is present below the normal operating water level in these drums.

The Coker Unit sour water tank shall have a minimum on-line retention time of three days. The tank shall be equipped with an oil skimming system, and shall be equipped with a hydrocarbon detection probe to determine the level of the hydrocarbon/water interface. **(11/05)**
 - B. The refinery Sour Water Tank (Tank No. 3003) shall have a minimum on-line retention time of 1.7 days, and the tank effluent shall be routed to the Unit 29 sulfide stripper prior to being routed to the Unit 44 refinery Sour Water Stripper (stripper "C"). Tank No. 3003 shall be equipped with an oil skimming system. Tank No. 3003 shall be equipped with a hydrocarbon detection probe ("Agar" brand capacitance probe or equivalent) to determine the level of the hydrocarbon/water interface. This interface level may also be determined manually from a tricock system on the tank shell. **(11/05)**
 - C. The refinery sour water shall be routed through an oil/water separator prior to entering Tank No. 3003. A hydrocarbon detection system ("Agar" brand capacitance probe or equivalent) shall be installed and operated in the line from the Unit 29 sulfide stripper to the refinery sour water stripper "C." Records of flow rates shall be maintained on-site and made available to the TCEQ Executive Director or a representative upon request. **(11/05)**

D. The readouts for the hydrocarbon/water interface level sensor in Tank No. 3003 and the hydrocarbon sensor in the line to the refinery sour water stripper "C" shall be transmitted to a control room. An alarm shall be transmitted to a control room when either sensor detects the presence of excess hydrocarbons and upon the activation of either alarm the following corrective actions shall be taken:

- (1) The permit holder shall examine SRU operation to determine whether the presence of hydrocarbons in the sour water feed appears to be disrupting SRU operations;
- (2) If the presence of hydrocarbons appears to be disrupting SRU operations in a manner that could result in excessive emissions, the permit holder shall stop the feed to sour water stripper "C," and
- (3) The permit holder shall identify and correct the cause of the high hydrocarbon content prior to resuming sour water feed to the stripper.

Records shall be kept of all instances in which alarms require subsequent corrective actions, indicating what actions were taken. **(12/04)**

E. Records shall be kept of all instances of Unit 29 sulfide stripper downtime and made available to the TCEQ Executive Director or a representative upon request. (PSD) **(12/04)**

8. A TGI 34 shall be operated with no less than 1.5 percent oxygen (O₂), dry, in the incinerator stack and at no less than 1170°F incinerator firebox exit temperature.

A TGI 43 shall be operated with no less than 1.0 percent O₂ in the incinerator stack and at no less than 1180°F incinerator firebox exit temperature.

If stack testing indicates that a higher temperature or excess O₂ is necessary to obtain a minimum H₂S destruction efficiency of 99.9 percent or 5 ppmv (corrected to 3 percent excess O₂) reduced sulfur compound exit concentration, then the temperature and excess O₂ maintained during the stack test will become the new minimum operating limits. (PSD) **(03/00)**

The mercox production unit VOC containing off gas stream shall be directed to EPN 3411 during normal operation of the mercox production unit. The mercox production unit VOC containing off gas stream can also be directed to the flare designated as EPN 66FL4 when EPN 341 can not receive this mercox production unit VOC containing off gas stream. **(02/11)**

9. The firebox temperature for each incinerator shall be continuously monitored and recorded at least once every four hours. In addition, continuous recording shall be required for all periods for which the temperature is below the minimum firebox temperature. If a continuous recorder is not available, manual readings recorded every 15 minutes shall be considered continuous recording.

Each temperature measurement device shall be installed, calibrated, and maintained according to accepted practice and the manufacturer's specifications. The device shall have an accuracy of the greater of ±0.75 percent of the temperature being measured expressed in degrees Celsius or ±2.5°C.

Quality-assured (or valid) data must be generated when the incinerator is operating except during the performance of a daily zero and span check. Loss of valid data due to periods of monitor break down, out-of-control operation (producing inaccurate data), repair, maintenance, or calibration may be exempted provided it does not exceed 5 percent of the time (in minutes) that the incinerator

operated over the previous rolling 12-month period. The measurements missed shall be estimated using engineering judgement and the methods used recorded. (PSD) **(11/05)**

10. The SRU TGIs shall operate with no visible emissions except for uncombined steam. (PSD)
11. The SRU thermal reactors shall at all times be operated with a stable flame and the flame temperature shall not be less than 2000°F. All sour water stripper gas shall be introduced to the front of the thermal reactor and none shall enter the side. These requirements become effective for SRU 34 when the sour water stripper (or NH₃ stripper) overheads are tied into Unit 34. (PSD) **(08/01)**
12. There shall be 45 H₂S monitors placed throughout the sulfur recovery, amine regeneration, and sour water stripping areas. These monitors shall be arranged in such a way that coverage is provided for wind directions varying through 360 degrees. The existing monitors shall be set to alarm at a concentration of 10 ppmv and shall alarm in the control room. (PSD)
13. Records shall be maintained indicating the truck or railcar loaded, loading start and stop date and time, and the volume or weight of the sulfur loaded. **(07/13)**

Piping, Valves, Pumps and Compressors in H₂S Service

14. This condition applies in the sulfur recovery, amine regeneration, Unit 19.3 hydrodesulfurization, sour water stripping areas and EPN F-Tier3. **(6/18)**
 - A. Audio, olfactory, and visual checks for leaks within the operating area shall be made once per shift.
 - B. Immediately, but no later than one hour upon detection of a leak, plant personnel shall take at least one of the following actions:
 - (1) Isolate the leak.
 - (2) Commence repair or replacement of the leaking component.
 - (3) Use a leak collection/containment system to prevent the leak until repair or replacement can be made if immediate repair is not possible.

The date and time of each inspection shall be noted in the operator's log or equivalent. Records shall be maintained at the plant site of all repairs and replacements made due to leaks. These records shall be made available to representatives of the TCEQ upon request.

SRUs

15. The following apply to liquid sulfur production, loading, and storage associated with SRU 43 and SRU 34: **(8/18)**
 - A. Sulfur produced and handled by SRU 43 shall be degassed to a concentration of no more than 15 parts per million by weight (ppmw) H₂S at the sulfur storage vessel KG-47. The sulfur collection tanks and degassing operations shall be connected to a vapor collection system which routes the recovered vapors back to the process or TGI. Alternative designs

for controlling emissions from sulfur handling equipment can be submitted to the TCEQ, Office of Air, Air Permits Division and the TCEQ Amarillo Regional Office for consideration.

- B. The holder of this permit shall test the H₂S concentration (in ppmw) of the sulfur produced by SRU 34 at the sulfur pit (or at the inlet of the degassing system once installed per Special Condition No. 15C) to confirm that the concentration is less than or equal to 300 ppmw. Sampling methods and procedures must be approved by the TCEQ Regional Director prior to sampling. The TCEQ Executive Director or designated representative shall be afforded the opportunity to observe all such sampling. The sampling shall occur at least once each quarter, but may be decreased to once each year once four satisfactory subsequent quarterly samples have been taken. If any annual sample exceeds the limit then sampling shall revert back to quarterly, but may decrease back to annual once four satisfactory subsequent quarterly samples have been taken. A copy of each sampling report shall be forwarded to the TCEQ Regional Office.
- C. No later than December 31, 2020 the liquid sulfur produced by SRU 34 shall be degassed by an above grade air stripper (or equivalent device). The effluent from the degassing stripper will be routed to the front end of SRU 34. The following shall apply:
 - (1) The liquid sulfur shall be routed to a covered sulfur storage pit. The breathing vents from the sulfur pit shall be routed to the incinerator (or SRU).
 - (2) All sulfur shall be degassed to an H₂S content of 100 parts per million (ppm) or less prior to loading. Records shall be maintained per Special Condition No. 13.
 - (3) The holder of this permit shall perform at his or her expense sampling and other testing as required to demonstrate the performance of the sulfur degassing system. The SRU shall operate at maximum sulfur production rate during sampling. Sampling methods and procedures must be approved prior to sampling by the TCEQ Regional Director. The TCEQ Executive Director or designated representative shall be afforded the opportunity to observe all such sampling.
 - (4) The sampling required in (3) of this condition shall occur within 30 days after the Unit 34 SRU degassing system starts operation and, after that, at least once every 12 months. Within 30 days after such sampling is completed, a copy of the final sampling report shall be forwarded to the TCEQ Regional Office.

Piping, Valves, Pumps, and Compressors in Hydrogen Fluoride (HF) Service-AVO

16.

- A. The AVO checks for HF leaks within the operating area shall be made every four hours.
- B. Immediately, but no later than one hour upon detection of a leak during the day shift, plant personnel shall take the following actions:
 - (1) Stop the leak by taking the equipment out of service or bypass the equipment so that it is no longer in service.
 - (2) Isolate the leak.
 - (3) Commence repair or replacement of the leaking component.

- (4) If the leak cannot be repaired within six hours, the holder of this permit shall use a leak collection or containment system to prevent the leak until repair or replacement can be made if immediate repair is not possible.
 - C. The above actions shall be taken immediately, but no later than one hour into the next day shift upon detection of a leak by night shift personnel.
 - D. Records shall be maintained at the plant site of the time leaks were detected and all repairs and replacements made due to leaks. These records shall be made available to representatives of the TCEQ upon request.
17. All waste gas streams containing HF shall be routed to a caustic scrubber system operating with a 99 percent HF removal efficiency prior to being routed to a flare. The circulation rate of the neutralization solution shall be checked and recorded every four hours. The caustic concentration of the neutralization solution shall be checked every 12 hours. The caustic concentration shall be checked more frequently during turnarounds or following unit unplanned maintenance, startup and shutdown activities. The caustic neutralization strength shall be maintained at no less than 0.8 percent (weight). The only exception would be during upset or maintenance events. In those cases, when the caustic concentration goes below 0.8 percent (weight), the caustic strength shall be raised as quickly as possible. Records of the caustic concentration shall be maintained on-site for a period of three years and made available to representatives of the TCEQ upon request. **(04/11)**
18. The cooling water shall be continuously monitored and recorded for pH at the Unit 22 cooling tower inlet. There shall be an alarm in the HF unit control room and/or HF plant area should the pH fall below five. Corrective action shall be taken immediately if the pH is less than five. If the continuous pH monitoring system is not operational, the holder of this permit shall begin recording pH manually once per shift, beginning with the shift following the monitoring system failure. The continuous pH monitoring system will be repaired within 15 days. **(08/01)**
19. The HF detection paint shall be used on all potential fugitive sources and possible leak sites. Locations with HF detection paint shall be inspected every four hours during the AVO checks required by the HF AVO condition. If leaks are detected, corrective action shall be taken immediately as described in the HF AVO condition. **(11/05)**
20. In the event of an HF release which may have the potential for off-site impacts, the holder of this permit shall implement the procedures outlined in the permit holder's emergency contingency and response plans.
21. There shall be no overhead work in the HF process unit where equipment is being lifted over unprotected vessels or lines without first completing a safe work checklist in accordance with Occupational Safety and Health Administration Process Safety Management rules. The safe work checklist shall be used to ensure that every effort is made to minimize the potential for an accident that would result in loss of integrity of HF-containing equipment.
22. The holder of this permit shall abide by the HF ambient monitoring program submitted September 25, 1996 and revised June 5, 1997. **(11/05)**

Fluid Catalytic Cracking Units

23. The maximum allowable concentrations and emissions of the following pollutants from Fluid Catalytic Cracking Unit (FCCU) Nos. 29 and 40 are included in best available control technology (BACT) short-term and annual cap calculations. The emissions cap based upon FCCU BACT emission levels shall be achieved no later than the date outlined in the BACT Implementation Schedule.

The CO concentration in the stack shall be maintained less than 500 ppmv on an hourly average at 0 percent oxygen when venting through the Units 29 and 40 FCCU stacks. **(12/06)**

24. Opacity of emissions from both FCCU's shall not exceed 20 percent except for those periods described in Title 30 Texas Administrative Code § 111.111 (a)(1)(E) [30 TAC § 111.111 (a)(1)(E)]. (PSD) **(08/08)**
25. Sulfur dioxide (SO₂) emissions from the FCCU Unit 29 and FCCU Unit 40 regenerators (EPN's 29P1 and 40P1) shall be 25 parts per million by volume dry (ppmvd) or lower on a 365-day rolling average basis and 50 ppmvd or lower on a seven-day rolling average basis at 0 percent O₂. **(08/08)**

Nitrogen oxides (NO_x) emissions from FCCU Unit 29 designated as EPN 29P1 shall be 20 ppmvd on a 365-day rolling average basis at zero percent oxygen (O₂) and 40 ppmvd on a seven-day rolling average basis at zero percent O₂, effective May 31, 2012. **(2/11)**

NO_x and Fuel Gas Standards

26. After completion of the BACT and Implementation Schedule, all Fired Units, with the exception of those listed below, shall be capable of operating with a combined hourly average NO_x emission factor of 0.06 pound (lb) NO_x/MMBtu based upon represented maximum firing rates. If an average NO_x factor of 0.06 lb NO_x/MMBtu is not obtained, the holder of this permit shall provide adequate information to demonstrate continuing compliance with the emissions cap. (PSD) **(12/06)**

EPN	Facility
34I1	SRU Incinerator
43I1	SCOT Unit Incinerator (A and B - common stack)
85B2	Unit 40 Boiler
98H1	Unit 98 Reformer Furnace
29H2	Unit 29 Preheater
50H1	Coker Unit 50 Charge Heater
51H1	Vacuum Unit 51 Charge Heater

27. Emissions of NO_x from the stacks of the following heaters shall not exceed 0.035 pound per million British thermal units (lb/MMBtu) based on higher heating value: **(04/05)**

Unit 98 Reformer Furnace (EPN 98H1)

Vacuum Unit Charge Heater (EPN 51H1)

Coker Charge Heater (EPN 50H1)

Beginning January 1, 2013, the Unit 41 SMR heater, EPN 41H1, shall achieve a NO_x emission limit of 0.01 lb/MMBtu (365 day rolling average) at a maximum capacity of 729 MMBtu/hr HHV (365 day rolling average). **(01/13)**

28. Fuel gas used to fire all heaters, boilers, and TGIs shall not exceed an H₂S concentration of 162 ppmv for the short-term and 60 ppmv for the annual average. The H₂S concentration in the fuel shall be continuously monitored and recorded according to NSPS, Subpart J requirements. (PSD)

Federal Applicability

29. This facility shall comply with all applicable requirements of EPA regulations on Standards of Performance for New Stationary Sources in 40 CFR Part 60 promulgated for the following: (PSD) **(04/16)**
- A. Subpart A, General Provisions.
 - B. Subpart Dc, Standards of Performance for Small Industrial-Commercial-Institutional Steam Generating Units.
 - C. Subpart J, Standards of Performance for Petroleum Refineries.
 - D. Subpart Ja, Standards of Performance for Petroleum Refineries for Which Construction, Reconstruction, or Modification Commenced After May 14, 2007.
 - E. Subpart K, Standards of Performance for Storage Vessels for Petroleum Liquids for Which Construction, Reconstruction, or Modification Commenced After June 11, 1973, and Prior to May 19, 1978.
 - F. Subpart Ka, Standards of Performance for Storage Vessels for Petroleum Liquids for Which Construction, Reconstruction, or Modification Commenced After May 18, 1978, and Prior to July 23, 1984.
 - G. Subpart Kb, Standards of Performance for Volatile Organic Liquid Storage Vessels (Including Petroleum Liquid Storage Vessels) for Which Construction, Reconstruction, or Modification Commenced after July 23, 1984.
 - H. Subpart GGG, Standards of Performance for Equipment Leaks of VOC in Petroleum Refineries for which Construction, Reconstruction, or Modification Commenced after January 4, 1983, and on or Before November 7, 2006.
 - I. Subpart GGGa, Standards of Performance for Equipment Leaks of VOC in Petroleum Refineries for which Construction, Reconstruction, or Modification Commenced After November 7, 2006.
 - J. Subpart QQQ, Standards of Performance for VOC Emissions From Petroleum Refinery Wastewater Systems
30. This facility shall comply with all applicable requirements of EPA regulations on National Emission Standards for Hazardous Air Pollutants in 40 CFR Part 61 promulgated for the following: (PSD) **(8/16)**

- A. Subpart A, General Provisions.
 - B. Subpart FF, National Emission Standard for Benzene Waste Operations.
31. This facility shall comply with all applicable requirements of EPA regulations on National Emission Standards for Hazardous Air Pollutants for Source Categories in 40 CFR Part 63 promulgated for the following: (PSD) **(5/18)**
- A. Subpart A, General Provisions.
 - B. Subpart CC, National Emission Standards for Hazardous Air Pollutants From Petroleum Refineries.
 - C. Subpart UUU, National Emission Standards for Hazardous Air Pollutants for Petroleum Refineries: Catalytic Cracking Units, Catalytic Reforming Units, and Sulfur Recovery Units.
 - D. Subpart ZZZZ, National Emission Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines.
 - E. Subpart DDDDD, National Emission Standards for Hazardous Air Pollutants for Industrial, Commercial, and Institutional Boilers and Process Heaters.
32. The opacity from all heaters, boilers, etc., shall not exceed 5 percent averaged over a six-minute period, except for those periods described in 30 TAC § 111.111(a)(1)(E). **(12/06)** (PSD)
33. The EPNs 66FL8, 66FL10, and 66FL11 will obtain a 98 percent hydrocarbon destruction efficiency.

The holder of this permit shall perform annual testing of the flare headers to determine actual emissions from the flares. The sampling information, flare operating time, and the demonstrated 98 percent destruction efficiency shall be used to determine flare actual emissions.

The holder of this permit shall submit test plans and schedules to the TCEQ Regional Office no less than 45 days prior to sampling to schedule a pretest meeting and to give the TCEQ an opportunity to comment, propose modifications, approve, and monitor the tests. Information to be included in the test plan and schedule shall include:

- A. Date for pretest meeting.
- B. Date(s) sampling will occur.
- C. Name of firm conducting the sampling.
- D. Type of sampling equipment to be used.
- E. Method or procedure to be used in sampling.
- F. Additional parameters to be monitored to ensure that the baseline is not exceeded from one annual test to the next.

The TCEQ Regional Director must approve any continuous or periodic monitoring system proposed for compliance with the annual testing requirements of this condition. **(04/05)**

34. Atmospheric relief valves in VOC service that are not equipped with rupture discs shall be checked for leaks on a quarterly basis with an approved gas analyzer. A leak shall be defined as 500 ppmv. There shall be no variance for inaccessible valves. All leaking valves shall be repaired or replaced at the earliest opportunity but not later than the next scheduled process shutdown. **(11/05)**

Storage and Loading of VOC

35. Storage tanks are subject to the following requirements. The control requirements specified in paragraphs A through D of this condition shall not apply (1) where the VOC has an aggregate partial pressure of less than 0.50 psia at the maximum feed temperature or 95°F, whichever is greater, or (2) to storage tanks smaller than 25,000 gallons. (Parts A through D are not necessary if you are only authorizing fixed-roof tanks.) **(11/05)**
- A. An internal floating deck or “roof” or equivalent control shall be installed in all tanks. The floating roof shall be equipped with one of the following closure devices between the wall of the storage vessel and the edge of the internal floating roof: (1) a liquid-mounted seal, (2) two continuous seals mounted one above the other, or (3) a mechanical shoe seal.
 - B. An open-top tank containing a floating roof (external floating roof tank) which uses double seal or secondary seal technology shall be an approved control alternative to an internal floating roof tank provided the primary seal consists of either a mechanical shoe seal or a liquid-mounted seal and the secondary seal is rim-mounted. A weathershield is not approvable as a secondary seal unless specifically reviewed and determined to be vapor-tight.
 - C. For any tank equipped with a floating roof, the permit holder shall perform the visual inspections and seal gap measurements as specified in 40 CFR § 60.113b, Testing and Procedures (as amended at 54 FR 32973, Aug. 11, 1989), to verify fitting and seal integrity. Records shall be maintained of the dates seals were inspected and seal gap measurements made, results of inspections and measurements made (including raw data), and actions taken to correct any deficiencies noted.
 - D. The floating roof design shall incorporate sufficient flotation to conform to the requirements of API Code 650 dated November 1, 1998, except that an internal floating cover need not be designed to meet rainfall support requirements and the materials of construction may be steel or other materials.
 - E. Except for logos, slogans and similar displays (not to exceed 15 percent of the vertical tank shell area), uninsulated tank exterior surfaces exposed to the sun shall be white, aluminum, or other equivalent color. Storage tanks must be equipped with permanent submerged fill pipes. **(12/06)**
 - F. The permit holder shall maintain an emissions record which includes calculated emissions of VOC from all storage tanks during the previous calendar month and the past consecutive 12-month period. The record shall include tank identification number, control method used, tank capacity in gallons, name of the material stored, VOC molecular weight, VOC monthly average temperature in degrees Fahrenheit, VOC vapor pressure at the monthly average material temperature in psia, VOC throughput for the previous month and year-to-date. Records of VOC monthly average temperature are not required to be kept for unheated tanks which receive liquids that are at or below ambient temperatures.

Emissions for tanks shall be calculated using: the TCEQ publication titled “Technical Guidance Package for Chemical Sources - Storage Tanks.”
 - G. Tanks taken out of hydrocarbon service, for any reason, do not have to have any controls in place during the time they are out of service.
 - H. Any slotted guidepole in an external floating roof equipped storage vessel that is an affected facility pursuant to 40 CFR §§ 60.110a or 60.110b (NSPS, Subpart Ka or Kb), will be subject

to a requirement to have either a pole float system or a pole sleeve system as described below installed.

Pole Float System - Each opening through the deck of the floating roof for a slotted guidepole shall be equipped with a deck cover, a pole wiper, and a pole float. The deck cover shall also be equipped with a gasket between the cover and deck. The wiper or seal of the pole float shall be at or above the height of the pole wiper.

Pole Sleeve System - Each opening through the deck of the floating roof for a slotted guidepole shall be equipped with a deck cover, a pole wiper and a pole sleeve. The deck cover shall be equipped with a gasket between the cover and the deck. The sleeve extends into the stored liquid.

Maintenance of the pole sleeve system or the pole float system is required as follows:

A "sleeve" or sliding cover shall be in place over the slotted-guidepole opening through the floating roof at all times except when the sliding cover must be removed for access.

If the control technology used includes a guidepole float, the float shall be floating within the guidepole at all times except when it must be removed for access to the stored liquid or when the tank is empty.

Visually inspect the deck fitting for the slotted guidepole at least once every ten years and each time the vessel is emptied and degassed. If the slotted guidepole deck fitting or control devices have defects or if a gap of more than 0.32 centimeter (1/8 inch) exists between any gasket required for control of the slotted guidepole deck fitting and any surface that it is intended to seal, such items shall be repaired before filling or refilling the storage vessel with regulated material. **(8/01)**

36. The emissions from compounds being loaded into tank trucks and/or railcars having a vapor pressure of greater than or equal to 0.5 psia at 100°F shall be collected and routed Thermal Oxidizer Unit (EPN 53FL1) or the following Flares (EPNs 66 FL1, -66FL2, -66FL3, -66FL4, or -66FL12). The thermal oxidizer unit shall be operated to ensure at least a 98 percent destruction efficiency of the VOC loading emissions or a VOC exit concentration of less than 20 ppmv, dry, corrected to 3 percent O₂. The required destruction efficiency of the flares shall be demonstrable by operation in compliance with Special Condition (SC) No. 2 of this permit. **(09/08)**

The oxidizer exit temperature shall be continuously monitored and the temperature readings shall be reduced to an averaging period of six minutes or less and recorded at that frequency. The exit temperature shall be maintained greater than 105°F or the temperature maintained during the last stack test performed in accordance with the stack sampling condition. Loading shall be secured immediately if this temperature cannot be maintained. In lieu of routing to a thermal oxidizer unit, collected emissions may be routed back into the process.

The temperature measurement device shall be installed, calibrated, and maintained according to accepted practice and the manufacturer's specifications. The device shall have an accuracy of the greater of ±0.75 percent of the temperature being measured expressed in degrees Celsius or ±2.5°C.

Quality-assured (or valid) data must be generated when the thermal oxidizer is operating except during the performance of a daily zero and span check. Loss of valid data due to periods of monitor break down, out-of-control operation (producing inaccurate data), repair, maintenance, or calibration may be exempted provided it does not exceed 5 percent of the time (in minutes) that the

thermal oxidizer operated over the previous rolling 12-month period. The measurements missed shall be estimated using engineering judgment and the methods used recorded. **(11/05)**

37. Tank trucks handling compounds with a vapor pressure greater than or equal to 0.5 psia at 100°F shall be leak-tested annually according to the requirements of NSPS, Subpart XX. Tank trucks shall be checked for the presence of leak testing certifications prior to being loaded. Tank trucks which are in "pressure service" (designed and operated with a pressure of greater than 15 pounds per square inch, gauge [psig]) are exempt from the leak testing requirement; however, the trucks shall be certified as pressure tight according to their applicable Department of Transportation regulations. **(11/05)**
38. The permit holder shall maintain and update monthly an emissions record which includes calculated emissions of VOC from all loading operations over the previous rolling 12-month period. The record shall include the loading spot, control method used, quantity loaded in gallons, name of the liquid loaded, vapor molecular weight, liquid temperature in degrees Fahrenheit, liquid vapor pressure in psia (at either the maximum loading temperature or the actual loading temperature), and liquid throughput for each month. Records of VOC temperature are not required to be kept for liquids loaded from unheated tanks which receive liquids that are at or below ambient temperatures. Emissions shall be calculated using the TCEQ publication titled "Technical Guidance Package for Chemical Sources - Loading Operations." **(11/05)**
39. The use of spew rods for gauging railcars and tank trucks in "pressure service" (designed and operated with a pressure of 15 psig or greater) shall either cease no later than December 31, 2005, or the holder of this permit shall provide adequate information to demonstrate continuing compliance with the emissions cap for those compounds being loaded. **(11/05)**

Piping, Valves, Connectors, Pumps, Agitators, and Compressors - 28VHP

40. Except as may be provided for in the special conditions of this permit, the following requirements apply to the above-referenced equipment. **(04/16)**
 - A. The requirements of paragraphs F and G shall not apply (1) where the VOC have an aggregate partial pressure or vapor pressure of less than 0.044 psia at 68°F or (2) to piping and valves two inches nominal size and smaller unless in fugitive areas F-9, F-10, F-28, F-23, F-36, F-32, F-1, F-2, F-2-1, F-2-5, F-4, F-5, F-6, F-7, F-11, F-19-1, F-19-2, or required by 40 CFR Part 63, Subpart H or CC, or (3) operating pressure is at least five kilopascals [0.725 pound per square inch (psi)] below ambient pressure. Equipment excluded from this condition shall be identified in a list to be made available upon request.

The exempted components may be identified by one or more of the following methods:

 - (1) piping and instrumentation diagram (PID);
 - (2) a written or electronic database or electronic file;
 - (3) color coding;
 - (4) a form of weatherproof identification; or
 - (5) designation of exempted process unit boundaries

- B. Construction of new and reworked piping, valves, pump systems, and compressor systems shall conform to applicable American National Standards Institute (ANSI), API, American Society of Mechanical Engineers (ASME), or equivalent codes.
- C. New and reworked underground process pipelines shall contain no buried valves such that fugitive emission monitoring is rendered impractical. New and reworked buried connectors shall be welded.
- D. To the extent that good engineering practice will permit, new and reworked valves and piping connections shall be so located to be reasonably accessible for leak-checking during plant operation. Difficult-to-monitor and unsafe-to-monitor valves, as defined by Title 30 Texas Administrative Code Chapter 115 (30 TAC Chapter 115), shall be identified in a list to be made readily available upon request. The difficult-to-monitor and unsafe-to-monitor valves may be identified by one or more of the methods described in subparagraph A above. If an unsafe-to-monitor component is not considered safe to monitor within a calendar year, then it shall be monitored as soon as possible during safe-to-monitor times. A difficult-to-monitor component for which quarterly monitoring is specified may instead be monitored annually.
- E. New and reworked piping connections shall be welded or flanged. Screwed connections are permissible only on piping smaller than two-inch diameter. Gas or hydraulic testing of the new and reworked piping connections at no less than operating pressure shall be performed prior to returning the components to service or they shall be monitored for leaks using an approved gas analyzer within 15 days of the components being returned to service. Adjustments shall be made as necessary to obtain leak-free performance. Connectors shall be inspected by visual, audible, and/or olfactory means at least weekly by operating personnel walk-through.

Each open-ended valve or line shall be equipped with an appropriately sized cap, blind flange, plug, or a second valve to seal the line. Except during sampling, both valves shall be closed. If the isolation of equipment for hot work or the removal of a component for repair or replacement results in an open ended line or valve, it is exempt from the requirement to install a cap, blind flange, plug, or second valve for 72 hours. If the repair or replacement is not completed within 72 hours, the permit holder must complete either of the following actions within that time period;

- (1) a cap, blind flange, plug, or second valve must be installed on the line or valve; or
 - (2) the open-ended valve or line shall be monitored once for leaks above background for a plant or unit turnaround lasting up to 45 days with an approved gas analyzer and the results recorded. For all other situations, the open-ended valve or line shall be monitored once within the 72 hour period following the creation of the open ended line and monthly thereafter with an approved gas analyzer and the results recorded. For turnarounds and all other situations, leaks are indicated by readings of 500 ppmv and must be repaired within 24 hours or a cap, blind flange, plug, or second valve must be installed on the line or valve.
- F. Accessible valves shall be monitored by leak checking for fugitive emissions at least quarterly using an approved gas analyzer. Sealless/leakless valves (including, but not limited to, welded bonnet bellows and diaphragm valves) and relief valves equipped with a rupture disc upstream or venting to a control device are not required to be monitored. If a relief valve is equipped with rupture disc, a pressure-sensing device shall be installed between the relief valve and rupture disc to monitor disc integrity.

A check of the reading of the pressure-sensing device to verify disc integrity shall be performed at least quarterly and recorded in the unit log or equivalent. Pressure-sensing

devices that are continuously monitored with alarms are exempt from recordkeeping requirements specified in this paragraph. All leaking discs shall be replaced at the earliest opportunity but no later than the next process shutdown.

The gas analyzer shall conform to requirements listed in Method 21 of 40 CFR part 60, appendix A. The gas analyzer shall be calibrated with methane. In addition, the response factor of the instrument for a specific VOC of interest shall be determined and meet the requirements of Section 8 of Method 21. If a mixture of VOCs is being monitored, the response factor shall be calculated for the average composition of the process fluid. A calculated average is not required when all of the compounds in the mixture have a response factor less than 10 using methane. If a response factor less than 10 cannot be achieved using methane, then the instrument may be calibrated with one of the VOC to be measured or any other VOC so long as the instrument has a response factor of less than 10 for each of the VOC to be measured.

Replacements for leaking components shall be re-monitored within 15 days of being placed back into VOC service.

- G. Except as may be provided for in the special conditions of this permit, all pump, compressor, and agitator seals shall be monitored with an approved gas analyzer at least quarterly or be equipped with a shaft sealing system that prevents or detects emissions of VOC from the seal. Seal systems designed and operated to prevent emissions or seals equipped with an automatic seal failure detection and alarm system need not be monitored. These seal systems may include (but are not limited to) dual pump seals with barrier fluid at higher pressure than process pressure, seals degassing to vent control systems kept in good working order, or seals equipped with an automatic seal failure detection and alarm system. Submerged pumps or sealless pumps (including, but not limited to, diaphragm, canned, or magnetic-driven pumps) may be used to satisfy the requirements of this condition and need not be monitored.
- H. Damaged or leaking valves or connectors found to be emitting VOC in excess of 500 parts per million by volume (ppmv) or found by visual inspection to be leaking (e.g., dripping process fluids) shall be tagged and replaced or repaired. Damaged or leaking pump, compressor, and agitator seals found to be emitting VOC in excess of 2,000 ppmv or found by visual inspection to be leaking (e.g., dripping process fluids) shall be tagged and replaced or repaired. A first attempt to repair the leak must be made within 5 days and a record of the attempt shall be maintained.
- I. A leaking component shall be repaired as soon as practicable, but no later than 15 days after the leak is found. If the repair of a component would require a unit shutdown that would create more emissions than the repair would eliminate, the repair may be delayed until the next scheduled shutdown. All leaking components which cannot be repaired until a scheduled shutdown shall be identified for such repair by tagging within 15 days of the detection of the leak. A listing of all components that qualify for delay of repair shall be maintained on a delay of repair list. The cumulative daily emissions from all components on the delay of repair list shall be estimated by multiplying by 24 the mass emission rate for each component calculated in accordance with the instructions in 30 TAC 115.782 (c)(1)(B)(i)(II). The calculations of the cumulative daily emissions from all components on the delay of repair list shall be updated within ten days of when the latest leaking component is added to the delay of repair list. When the cumulative daily emission rate of all components on the delay of repair list times the number of days until the next scheduled unit shutdown is equal to or exceeds the total emissions from a unit shutdown as calculated in accordance with 30 TAC 115.782 (c)(1)(B)(i)(I), the TCEQ Regional Manager and any local programs

shall be notified and may require early unit shutdown or other appropriate action based on the number and severity of tagged leaks awaiting shutdown. This notification shall be made within 15 days of making this determination.

- J. Records of repairs shall include date of repairs, repair results, justification for delay of repairs, and corrective actions taken for all components. Records of instrument monitoring shall indicate dates and times, test methods, and instrument readings. The instrument monitoring record shall include the time that monitoring took place for no less than 95% of the instrument readings recorded. Records of physical inspections shall be noted in the operator's log or equivalent.
 - K. Alternative monitoring frequency schedules of 30 TAC § 115.352 - 115.359 or National Emission Standards for Organic Hazardous Air Pollutants, 40 CFR Part 63, Subpart H, may be used in lieu of Items F through G of this condition.
 - L. Compliance with the requirements of this condition does not assure compliance with requirements of 30 TAC Chapter 115, an applicable New Source Performance Standard (NSPS), or an applicable National Emission Standard for Hazardous Air Pollutants (NESHAPS) and does not constitute approval of alternative standards for these regulations.
 - M. The reading of the pressure-sensing device to verify disc integrity performed at least quarterly and recorded in the unit log or equivalent in Paragraph F is not required prior to January 1, 2017.
41. For purposes of establishing the emission caps for this flexible permit, implementation of the 28 VHP Leak Detection and Repair (LDAR) program and the appropriate reduction credits were utilized. If any other LDAR program is used for a set of components subject to this permit, the fugitive emissions for all components shall be calculated using the appropriate reduction credits for the LDAR program actually used to monitor each component. For components monitored under an LDAR program other than 28 VHP, the net emission rates from those components must be equivalent or less than those obtained if 28 VHP were in place.

The holder of this permit shall maintain a listing of each LDAR program utilized, and the unit to which that program is applied. This information shall be made available to representatives of the TCEQ upon request. **(9/08)**

42. As an alternative to comparing the daily emission rate of the components on the delay of repair (DOR) list to the total emissions from a unit shutdown per the requirements of Special Condition No. 40, Subparagraph I, the cumulative hourly emission rate of all components on the DOR list may be compared to ten percent of the total short term VOC fugitive cap contributions in order to determine if the TCEQ Regional Director and any local program is to be notified. In addition, the hourly emission rates of each specific compound on the DOR list must be less than ten percent of the speciated hourly fugitive emission rate of the same compound, as used in the most recent applicable Air Quality Analysis. **(6/12)**
43. The requirements of SC 40.I. and 42. shall take effect 180 days after the start-up of the modified Unit 42 Gas Oil Hydrodesulfurizer (GOHDS) fractionator. Until that time the following requirements shall be met:

Every reasonable effort shall be made to repair a leaking component, as specified in this paragraph, within 15 days after the leak is found. If the repair of a component would require a unit

shutdown, the repair may be delayed until the next scheduled shutdown. All leaking components which cannot be repaired until a scheduled shutdown shall be identified for such repair by tagging.

The TCEQ Executive Director may require early unit shutdown or other appropriate action based on the number and severity of tagged leaks awaiting shutdown. **(6/12)**

44. In addition to the weekly physical inspection required by Item E of the 28 VHP LDAR condition, all connectors subject to 40 CFR Part 63, Subpart H in gas/vapor and light liquid service shall be monitored annually with an approved gas analyzer in accordance with Items F through J of the 28 VHP LDAR condition. Alternative monitoring frequency schedules of 40 CFR Part 63, Subpart H, National Emission Standards for Organic Hazardous Air Pollutants for Equipment Leaks, may be used in lieu of the monitoring frequency required by this permit condition. Compliance with this condition does not assure compliance with requirements of applicable state or federal regulation and does not constitute approval of alternative standards for these regulations. **(05/99)**

Cooling Towers

45. The VOC associated with cooling tower water shall be monitored monthly with an air stripping system meeting the requirements of the TCEQ Sampling Procedures Manual, Appendix P (dated January 2003 or a later edition) or an approved equivalent sampling method. The results of the monitoring, cooling water flow rate, and maintenance activities on the cooling water system shall be recorded.

The monitoring results and cooling water hourly mass flow rate shall be used to determine cooling tower hourly VOC emissions. The rolling 12-month cooling water emission rates shall be recorded on a monthly basis and used to determine compliance with the emission cap. Actual emissions from each cooling tower shall be determined by summing the VOC emissions between VOC monitoring periods over the rolling 12-month period.

The emissions between VOC monitoring periods shall be obtained by multiplying the total cooling water mass flow between cooling water monitoring periods by the higher of the two VOC monitored results. **(11/05)**

Engines

46. Fuel used in the four-cycle and two-cycle engines shall be pipeline-quality, sweet natural gas with a fuel sulfur content of no more than 0.25 grain/100 standard cubic feet (scf) (or 4.0 ppmv), or NSPS J quality plant fuel gas supplies containing less than 162 ppmv H₂S. Records shall be maintained containing the period of time that 162 ppmv gas was burned in the engines. These records shall be used in determining compliance with the emissions cap. **(09/08)**
- A. This permit authorizes emissions from the Emergency Fire Water Pump Engines (EPNs FWP1, FWP2, FWP3, FWP4, and FWP5) for firefighting and preventative maintenance and testing. The operation of each emergency fire water pump engine is limited to 35 hours per year, except during emergencies. The performance of each maintenance and testing activity and the associated emissions shall be recorded and the rolling 12-month emissions shall be updated on a monthly basis. These records shall include the following: **(09/09)**

- (1) the physical location at which emissions from the activity occurred, including the emission point number, common name, and any other identifier for the point at which the emissions were released into the atmosphere;
 - (2) the common name and the facility identification number of the facility at which activity and emissions occurred;
 - (3) the date and time of the activity and its duration.
47. Emissions of NO_x, CO, and VOC from the following engines shall be reported on a dry basis in brake specific units of gram per horsepower-hour (g/hp-hr) and in units of lb/hr. After completion of the BACT and implementation schedule, the engines shall achieve the following. **(05/03)**

Emission Unit	Air Contaminant	Emission Rate
Clark 230VRP	CO	5.8 g/hp-hr
	NO _x	8.0 g/hp-hr
	VOC	1.3 g/hp-hr
Clark RA-6 and RA-8	CO	3.0 g/hp-hr
	NO _x	8.0 g/hp-hr
	VOC	4.0 g/hp-hr
White-Superior 8G-825, 6G-825, and 4G-825	CO	3.0 g/hp-hr
	NO _x	2.0 g/hp-hr
	VOC	1.0 g/hp-hr

Emissions of NO_x, CO and VOC after installation of NO_x controls (includes reduced annual emission rates): **(02/12)**

Type of Emission Unit	EPN	Emission Control Technique	Max. Heat Capacity Limit (HHV)	CO	NO _x short term/ annual	VOC	Hours
			MMBtu/hr*	g/hp-hr [lb/MMBtu]*			
Engine #37 Clark RA-8	93E1	Prestratified charge system	8.80	3.0 [0.69]	8.0 [1.84]/ 2.04 [0.47]	4.0 [0.92]	8,760
Engine #46 White-Superior 425 hp	12E6	Prestratified charge system & catalyst	3.29	3.0 [0.89]	2.0[0.87]/ 1.58 [0.47]	1.0 [0.30]	8,760

* On a 365 day rolling average

48. Rich burn engines modified through the use of a catalyst to meet BACT requirements shall be equipped with air/fuel ratio controllers which maintain the exhaust O₂ content in the range demonstrated by initial testing. The O₂ sensor shall be replaced on a quarterly basis or every 2,000 hours (whichever is longer). Documentation shall be maintained, for each air/fuel controller, that the manufacturers or supplier's recommended maintenance has been performed. **(09/09)**

49. Opacity of emissions from engines modified to meet BACT shall not exceed 5 percent averaged over a six-minute period, except for those periods described in 30 TAC § 111.111(a)(1)(E).

Demonstration of Compliance

50. The holder of this permit shall perform initial and biennial stack sampling and other testing to establish the actual pattern and quantities of air contaminants being emitted into the atmosphere from the engines.

Gaseous sampling port(s) and sampling platforms(s) shall be incorporated into the design of the engine stack per specifications in the attachment entitled "Chapter 2, Stack Sampling Facilities" of the TCEQ Sampling Procedures Manual. Alternate sampling facility designs may be submitted for approval by the TCEQ Regional Director.

- A. The appropriate TCEQ Regional Office shall be contacted as soon as testing is scheduled, but not less than 45 days prior to sampling to schedule a pretest meeting.

The notice shall include:

- (1) Date for pretest meeting.
- (2) Date sampling will occur.
- (3) Name of firm conducting sampling.
- (4) Type of sampling equipment to be used.
- (5) Method or procedure to be used in sampling.
- (6) Procedure to be used to determine engine horsepower load during sampling period.

The purpose of the pretest meeting is to review the necessary sampling and testing procedures, to provide the proper data forms for recording pertinent data, and to review the format procedures for submitting the test reports.

During the pretest meeting, the applicant may request the use of EPA Method 19 (as referenced by 30 TAC § 106.512) to calculate the stack flow. Pertinent data, including fuel flow, shall be recorded and included in the sampling report. Any data and/or records required in addition to the EPA Method 19 requirements shall be addressed at the pretest meeting. The method of flow measurement shall be that listed in the testing protocol and must be approved by the TCEQ prior to testing. A written proposed description of any deviation from sampling procedures specified in permit conditions or the TCEQ or EPA sampling procedures shall be made available to the TCEQ prior to the pretest meeting. The TCEQ Regional Director shall approve or disapprove of any deviation from specified sampling procedures.

- B. Air contaminants emitted from the engines to be tested for include (but are not limited to) NO_x, CO and O₂.
- C. Engine emissions shall be determined by appropriate EPA methods or other methods approved by the TCEQ Regional Director prior to sampling. Methods described in 30 TAC § 106.512(2)(C)(iii) are considered to be approved methods.

Emissions shall be sampled at minimum, average, and maximum engine rounds per minute (RPMs). Sampling at different RPMs is not required if the operating minimum, average, and maximum RPMs are within 10 percent of the maximum RPMs. Every effort should be made

to conduct initial compliance testing during conditions which demand the maximum horsepower expected for the engine.

- D. Sampling shall be performed within 60 days after the completion of engine modifications (or within 60 days after issuance of the flexible permit if a specific engine is not going to be modified), and other such times as determined necessary to verify compliance with the emissions cap as required by the TCEQ Regional Director or the TCEQ Executive Director. Requests for additional time to perform sampling shall be submitted to the TCEQ Regional Office.
 - E. One copy of the final sampling report shall be forwarded to the TCEQ Amarillo Regional Office within 60 days after sampling is completed. Sampling reports shall comply with the Chapter 14 of the TCEQ Sampling Procedures Manual.
51. In order to demonstrate that compliance for all engines is continuously met, the holder of this permit shall perform the following: **(11/05)**
- A. Conduct evaluations of engine performance on a quarterly basis at full engine load and speed by measuring the NO_x and CO content of the exhaust.

The use of portable analyzers specifically designed for measuring the concentration of each contaminant in ppmv is acceptable for these evaluations. A hot air probe or equivalent shall be used with portable analyzers to prevent error results due to high exhaust gas temperatures.

Three sets of measurements shall be averaged to determine the concentrations. Prior to and following the measurements, the portable analyzer shall be checked for accuracy using an audit gas that conforms to the specifications in 40 CFR Part 60, Appendix F, § 5.1.2(3). Any other method shall be approved by the TCEQ Regional Director.
 - B. If the engine employs NSCR emission control, emissions testing shall be performed no later than 14 days following any maintenance performed on the air/fuel ratio controller, sensor, or catalyst (including catalyst cleaning or replacement) and following engine maintenance which may affect the character and quantity of emissions.
 - C. If the engine employs a Pre-Stratified Charge (PSC) emission control system, emissions testing shall be performed no later than 14 days following any maintenance or shutdown of the engine which may affect ignition timing, initial carburetor setting, or the air dilution control system. In addition, every 2,000 hours of engine operation or quarterly the holder of this permit shall ensure that the engine meets the emission standard.

Emissions shall be measured and recorded in the as-found operating condition, except no compliance determination shall be established during start-up, shutdown, or under breakdown conditions. **(11/05)**

Stack Sampling

52. The holder of this permit shall perform stack sampling and other testing, as required, to establish the actual pattern and quantities of air contaminants being emitted into the atmosphere from the following sources:

Units 29 and 40 FCCU Stacks (EPNs 29P1 and 40P1), and SRU 43 and 34 TGI Stacks (EPNs 43I1 and 34I1). **(04/05)**

All boilers, heaters, etc., with firing rates of 40 MMBtu/hr or greater including the Unit 40 Boiler shall be subject to stack sampling. In addition, common stacks containing units capable of 40 MMBtu/hr or greater shall also be sampled. **(12/06)**

The holder of this permit is responsible for providing sampling and testing facilities and conducting the sampling and testing operations at his expense.

- A. The appropriate TCEQ Regional Office in the region where the source is located shall be contacted as soon as testing is scheduled, but not less than 45 days prior to sampling to schedule a pretest meeting.

The notice shall include:

- (1) Date for pretest meeting.
- (2) Date sampling will occur.
- (3) Name of firm conducting sampling.
- (4) Type of sampling equipment to be used.
- (5) Method or procedure to be used in sampling.

The purpose of the pretest meeting is to review the necessary sampling and testing procedures, to provide the proper data forms for recording pertinent data, and to review the format procedures for submitting the test reports.

A written proposed description of any deviation from sampling procedures specified in permit conditions or TCEQ or EPA sampling procedures shall be made available to the TCEQ prior to the pretest meeting. The TCEQ Regional Director or the TCEQ Austin Compliance Support Division shall approve or disapprove of any deviation from specified sampling procedures.

Requests to waive testing for any pollutant specified in B of this condition shall be submitted to the TCEQ Air Permits Division. Test waivers and alternate or equivalent procedure proposals for NSPS testing which must have EPA approval shall be submitted to the TCEQ Regional Director.

- B. Air contaminants emitted from the listed sources to be tested for include (but are not limited to) the following:

FCCU Stacks	NO _x , CO, SO ₂ , O ₂ , TSP* and PM ₁₀ *
SRU TGIs	NO _x , CO, SO ₂ , O ₂ and H ₂ S
Boilers, Heaters, Furnaces, etc.	NO _x , CO, SO ₂ , VOC, and O ₂

* TSP - total suspended particulate, PM₁₀ - particulate matter of 10 microns or less

- C. Sampling shall occur within 60 days after the completion of boiler/heater, etc., modifications to a specific unit, and other such times as may be required by the TCEQ Regional Director or the TCEQ Executive Director. Requests for additional time to perform sampling shall be submitted to the TCEQ Regional Office. Additional time to comply with the applicable requirements of 40 CFR Part 60 and 40 CFR Part 61 requires EPA approval, and requests shall be submitted to the TCEQ Regional Director. **(04/05)**

- D. The EPN being tested shall operate at maximum production or firing rates during stack emission testing. Primary operating parameters that enable determination of production rate shall be monitored and recorded during the stack test. These parameters are to be determined at the pretest meeting. If the EPN is unable to operate at maximum rates during testing, then future production rates may be limited to the rates established during testing. Additional stack testing may be required if the firing rate exceeds the tested firing rate by more than 10 percent. (Additional testing will not be required if the EPN is equipped with a continuous emissions monitoring system [CEMS].)
- E. One copy of the final sampling report shall be forwarded to the TCEQ Amarillo Regional Office within 60 days after sampling is completed. Sampling reports shall comply with the attached provisions of Chapter 14 of the TCEQ Sampling Procedures Manual.
- F. Stack sampling for those units which are not equipped with a CEMS shall be repeated every five years after the initial sampling in conformity with A, B, and D of this condition. Unit 19.3 shall be sampled every two years until a CEMS is operating to monitor emissions. **(12/04)**

The applicable FCCU Stacks (EPNs 29P1 and 40P1) shall be sampled annually for TSP and PM₁₀ when the FCCU air coolers are in operation. (PSD) **(12/06)**

53. The holder of this permit shall install, calibrate, and maintain a CEMS to measure and record the in-stack concentrations of the following compounds from the indicated sources: **(09/08)**

- A. The Units 29 and 40 FCCU Stacks (EPNs 29P1 and 40P1): SO₂, NO_x, CO, O₂ and opacity. **(04/05)**
- B. The SRU 34 TGI Stack (EPN 34I1): SO₂ and O₂. The SRU 43 TGI Stack (EPN 43I1): SO₂, CO, and O₂.
- C. The Unit 98 Reformer Furnace (EPN 98H1): NO_x, CO and O₂. The CEMS shall be installed and operational upon start-up of the furnace. **(04/05)**
- D. The Unit 50 Charge Heater (EPN 50H1): NO_x, CO and O₂. The CEMS shall be installed and operational upon start-up of the heater. **(04/05)**
- E. The Unit 51 Charge Heater (EPN 51H1): NO_x, CO and O₂. The CEMS shall be installed and operational upon start-up of the heater. **(04/05)**
- F. The Unit 40 Boiler (EPN 85B2): NO_x, CO and O₂. The CEMS shall be installed and operational upon start-up of the boiler. **(09/08)** .

After a shakedown period not to exceed 180 days, the Unit 40 Boiler shall not exceed a NO_x emission rate of 0.02 lb/MMBtu based on a three hour average and a CO concentration in the stack of 100 parts per million by volume dry at 3 percent O₂ based on a three-hour average. **(12/06)**

With the exception of the above sources, a CEMS used to measure and/or predict and record the in-stack concentrations of NO_x, CO and O₂ shall be operational and used to monitor emissions within one year of emitting greater than 26.3 tons per year (tpy) NO_x (26.3 tpy NO_x is calculated from 0.06 lb NO_x/MMBtu based on a 100 MMBtu/hr firing duty) from any boiler, heater or combustion device with a maximum firing rate greater than or equal to 100 MMBtu/hr (this includes Unit 19.3 [Distillate Charge Furnace]). These units shall be monitored as required in the Stack Sampling condition with a two-year stack sampling period until a CEMS is required. The terms of this paragraph are effective upon implementation of BACT for the particular combustion device. **(12/04)**

The monitoring system shall meet the following section of Requirements for CEMS: **(12/04)**

54. Requirements for CEMS:

The CEMS shall meet the design and performance specifications, pass the field tests, and meet the installation requirements and the data analysis and reporting requirements specified in the applicable Performance Specification Nos. 1 through 9, 40 CFR Part 60, Appendix B.

If there are no applicable performance specifications in 40 CFR Part 60, Appendix B, contact the TCEQ Office of Air, Air Permits Division for requirements to be met.

A. Section 1 below applies to sources subject to the quality-assurance requirements of 40 CFR Part 60, Appendix F; section 2 applies to all other sources:

- (1) The permit holder shall assure that the CEMS meets the applicable quality-assurance requirements specified in 40 CFR Part 60, Appendix F, Procedure 1. Relative accuracy exceedances, as specified in 40 CFR Part 60, Appendix F, Section 5.2.3 and any CEMS downtime shall be reported to the appropriate TCEQ Regional Manager, and necessary corrective action shall be taken. Supplemental stack concentration measurements may be required at the discretion of the appropriate TCEQ Regional Manager.
- (2) The system shall be zeroed and spanned daily, and corrective action taken when the 24-hour span drift exceeds two times the amounts specified in the applicable Performance Specification Nos. 1 through 9, 40 CFR Part 60, Appendix B, or as specified by the TCEQ if not specified in Appendix B. Zero and span is not required on weekends and plant holidays if instrument technicians are not normally scheduled on those days.

B. Each monitor shall be quality-assured at least quarterly using Cylinder Gas Audits (CGA) in accordance with 40 CFR Part 60, Appendix F, Procedure 1, § 5.1.2, with the following exception: a relative accuracy test audit (RATA) is not required once every four quarters (i.e., four successive quarterly CGA may be conducted). An equivalent quality-assurance method approved by the TCEQ may also be used. Successive quarterly audits shall occur no closer than two months.

All CGA exceedances of +15 percent accuracy indicate that the CEMS is out of control.

C. The monitoring data shall be reduced to an hourly average concentration at least once every day, using a minimum of four equally-spaced data points from each one-hour period. The individual average concentrations shall be reduced to units of pounds per hour at least once every week as follows:

The measured hourly average concentration from the CEMS shall be multiplied by the flow rate. Units that do not have flow meters may use the flow rate measured during the latest stack test performed in accordance with SC No. 52 to determine the hourly emission rate.

D. All monitoring data and quality-assurance data shall be maintained by the source. The data from the CEMS may, at the discretion of the TCEQ, be used to determine compliance with the conditions of this permit.

E. The appropriate regional office shall be notified at least 30 days prior to any required RATA in order to provide them the opportunity to observe the testing.

- F. Quality-assured (or valid) data must be generated when the facility (FCCU, TGI, furnace, boiler, or heater, as listed in this condition) is operating except during the performance of a daily zero and span check. Loss of valid data due to periods of monitor break down, out-of-control operation (producing inaccurate data), repair, maintenance, or calibration may be exempted provided it does not exceed 5 percent of the time (in minutes) that the facility generating emissions operated over the previous rolling 12-month period. The measurements missed shall be estimated using engineering judgment and the methods used recorded. Options to increase system reliability to an acceptable value, including a redundant CEMS, may be required by the TCEQ Regional Director. **(11/05)**

55. Boilers, heaters, etc., with maximum firing rates of greater than or equal to 40 MMBtu/hr and less than 100 MMBtu shall be monitored in accordance with this condition. The terms of this condition are effective upon implementation of BACT for a particular device or for combustion devices for which additional controls are not anticipated within five years from the issuance of the flexible permit.

Stack sampling shall take place as required by the stack sampling condition. After completion of the initial stack test, the holder of this permit shall conduct grab samples (or spot checks with a portable analyzer) for NO_x and CO. The spot checks shall be comprised of no less than the average of three 15-minute readings for each pollutant. These checks shall be performed annually for Heater 9 (EPN 9H1), Heater 36 (EPN 36H1), Heater 26 (EPN 26H1), and Column 45 Reboiler (EPN 2H2); semiannually for Heaters 7 (EPN 7H1-4), Heater 42A (EPN 42H1), Heater 42B (EPN 42H2), and Heater 11 (EPN 11H1), and quarterly for any other units.

The fuel flow rate shall be continuously monitored and recorded. The heating value of the fuel (Btu/scf) shall be measured and recorded once per week. Heating values for purchased fuel gas supplies may, as an alternate, be calculated based upon a monthly composite from samples taken at least once per day. The methods, criteria, equipment, etc., used in conducting the spot checks shall be approved by the TCEQ Austin Compliance Support Division prior to conducting any spot checks.

The results of the spot checks shall be recorded in terms of ppm and converted into values of lb/hr and TPY within 30 days of sampling.

The SO₂ emissions from the unit shall be estimated monthly based upon the H₂S concentrations obtained from the H₂S fuel gas monitoring system (required by NSPS, Subpart J) and the fuel flow rate.

The CO and NO_x emission factors generated from the spot checks shall be used in lieu of those generated using the last stack test results obtained to determine actual emissions from the unit if results of the spot check are greater than those obtained in the last stack test.

The holder of this permit may petition the TCEQ for a reduction in the spot-checking frequency on an EPN-by-EPN basis. If the five-year stack test is failed, the EPN failing the stack test shall revert back to the quarterly basis until at least one year of data is collected. (PSD) **(02/04)**

56. For boilers, heaters, etc., with maximum firing rates less than 40 MMBtu/hr, the heating value of the fuel (Btu/scf) shall be measured and recorded once per week. Heating values for purchased fuel gas supplies may, as an alternate, be calculated based upon a monthly composite from samples taken at least once per day. The fuel flow rate shall be continuously monitored and recorded (in

addition to the H₂S concentrations obtained from the H₂S fuel gas monitoring system). Records shall be maintained indicating any exceedance of a unit's represented firing rates. Should the firing rate of any unit exceed its permit representations, the holder of this permit shall provide adequate information to demonstrate continuing compliance with the emissions cap.

Quality assured (or valid) data must be generated when a boiler, heater, etc. is operating. Loss of valid data due to periods of monitor break down, out-of-control operation (producing inaccurate data), repair, maintenance, or calibration may be exempted provided it does not exceed 5 percent of the time (in minutes) that a boiler, heater, etc. operated over the previous rolling 12 month period. The measurements missed shall be estimated using engineering judgment and the methods used recorded. **(04/16)**

Recordkeeping

57. Recordkeeping programs for those facilities authorized by the flexible permit shall be established and maintained such that the ability to demonstrate compliance with all authorized emission caps (short-term and annual) are ensured. Records of all compliance testing, CEM results, and process parameters necessary to demonstrate compliance with the emission rate caps shall be maintained on-site for a period of three years.

Compliance with annual TPY emissions shall be based on calendar basis through the year 2006 and on a 12-month rolling average thereafter. Emissions calculations for verifying compliance with the emission caps shall be calculated at least once every month. The holder of this permit shall maintain all records necessary to demonstrate compliance with the short-term lb/hr and annual TPY emissions cap and provide such demonstration of compliance to the TCEQ Regional Office upon request.

The permit holder shall retain a copy of the permit application dated November 2007 and of any subsequent applications related to this permit. These records shall be retained for the effective life of the permit plus five years. **(11/08)** (PSD)

These and all other records required by any previous condition of this permit shall be made available to the TCEQ Executive Director or a representative upon request. (PSD)

58. All control upgrades implemented for facilities authorized by the flexible permit shall be completed as on a schedule to assure compliance with all short-term lb/hr and annual TPY emission caps as tabulated on the attached emission cap tables. (PSD)

Adjustment of Emission Rates

59. The emission rate estimates for flare and wastewater sources being tested initially as specified in the conditions of this flexible permit and the associated emission caps shall be adjusted as necessary to reflect the initial testing results. Piping component counts and fugitive emission estimates for the current and final emission caps shall be adjusted as necessary to reflect actual component counts as shown by the required LDAR program(s). Adjustments which result in an increase in estimated emissions shall require a permit amendment, and decreases in emission estimates may be affected by the use of a permit alteration. **(03/00)**

FCCU Particulate Monitoring

60. The permit holder shall continuously monitor and record the air flow rate to the regenerators. This value shall be used with the most recent stack test results performed in accordance with the Stack Sampling condition to determine the particulate emissions (TSP) from the FCCUs.

The permit holder shall install, calibrate, operate and maintain a continuous opacity monitoring system (COMS) to measure and record the opacity from the electrostatic precipitator (ESP).

- A. The COMS shall meet (40 CFR Part 60), Appendix B Performance Specification No 1. The initial performance evaluation of the COMS required by the performance specification shall be conducted and passed within 60 days of start-up.
- B. The COMS shall meet the requirements of 40 CFR § 60.13. The appropriate TCEQ Regional Manager will be the administrator for alternate monitoring requests, except where the monitoring is also required by an applicable NSPS (40 CFR Part 60) or NESHAP (40 CFR Part 61 or Part 63) where EPA Region 6 remains the administrator for alternate monitoring requests.

Alternate monitoring requests should be submitted to the appropriate TCEQ Regional Director and EPA Region 6, when they are the administrator, with copies to any local air pollution programs and the TCEQ Regional Director.

- C. Monitoring data shall be recorded and maintained as specified in 40 CFR §§ 60.7(c), (d), (e), and (f).
- D. The appropriate TCEQ Regional Office and any local air pollution programs shall be notified at least 30 days prior to any required initial performance evaluation.
- E. Quality-assured (or valid) data must be generated when the FCCU is operating except during the performance of a daily zero and span check. Loss of valid data due to periods of monitor break down, out-of-control operation (producing inaccurate data), repair maintenance, or calibration may be exempted provided it does not exceed 5 percent of the time (in minutes) that the FCCU is operated over the previous rolling 12-month period. **(11/05)**

Coke Storage and Handling (04/05)

61. The permit holder will ensure that a minimum coke moisture content of 6 percent (by weight) is maintained. Water sprays shall be used as necessary throughout the coke handling and loading process to minimize particulate emissions.
62. During normal operations (coke loaded from the silo), samples for moisture analysis shall be taken of coke to be loaded when more than 48 hours elapses between loading events. Sampling shall occur with one hour prior to the start of loading. **(11/05)**
63. The opacity of emissions from any transfer point, conveyor, crusher, etc., at this unit shall not exceed 5 percent averaged over a six-minute period, except for those periods described in 30 TAC § 111.111(a)(1)(3). No visible emissions may leave the plant property. If visible emissions do leave the plant property, further controls or measures shall be installed and/or implemented as required to limit visible emissions.

64. Coke handling conveyors shall be completely covered on top, bottom, and one side with a partial opening on the other side for inspection purposes.
65. Coke may be stockpiled at the site. During such periods, the following shall apply: **(09/08)**
 - A. A watering truck or other watering device (such as a sprinkler system, etc.) shall be used on the coke stockpile as necessary to minimize particulate emissions. Final design of a watering system other than a watering truck shall be approved by the TCEQ Amarillo Regional Office prior to installation.
 - B. The permit holder shall take samples of the stockpiled coke within one hour prior to the scheduled application of water. Sampling frequency shall be once every other day until the coke stockpile is removed. Sampling locations shall be rotated sufficiently to ensure representative coverage of the stockpile.
 - C. Records shall be kept of daily quantities of total coke produced, total coke exported, coke moved to the stockpile, and coke moved from the stockpile.
66. Coke samples shall be analyzed for moisture content using American Society for Testing and Materials or other methods as agreed upon by the TCEQ Amarillo Regional Office.

Powdered Activated Carbon Silos

67. A fabric filter shall control particulate matter (PM) emissions from the Powdered Activated Carbon Silos. The PM outlet grain loading from fabric filters shall not exceed 0.007 grain per dry standard cubic foot of air. There shall be no visible emissions exceeding 30 seconds in any six-minute period as determined using U.S. Environmental Protection Agency (EPA) Test Method 22. **(11/05)**

Flare Emission Event Setpoints

68. The following emission rates shall be used to evaluate whether an emission event may be reportable as per 30 TAC § 101.201(a)(1)(A). These rates are not intended to be used as emissions limitations for the purposes of compliance with this permit. **(05/08)**

Maximum Emissions when Flares are Connected				
EPN's	SO₂ lb/hr	NO_x lb/hr	VOC lb/hr	CO lb/hr
66FL1 66FL2	8.0	4.0	38.6	22.4
66FL3 66FL12	86.8	8.1	23.4	45.7
66FL6 66FL12	160.7	4.6	11.4	26.2
66FL4 66FL6	103.4	5.5	60.6	43.6

69. The Acid Gas Flare (EPN 66FL6) and the Derrick Flare (EPN 66FL13) are affected facilities under the EPA regulations in 40 CFR Part 60 (NSPS) and are subject to the requirements of Subpart A and Subpart J (40 CFR Part 60, Subparts A and J) for sulfur dioxide. **(05/08)**

70. The East Refinery Flare (EPN 66FL1), West Refinery Flare (EPN 66FL2), CAT Flare (EPN 66FL3), and GOHDS Flare (EPN 66FL12) are affected facilities, as of December 31, 2011, under the EPA regulations in 40 CFR Part 60 (NSPS) and are subject to the requirements of Subpart J (40 CFR, Part 60, Subpart J). **(02/12)**

The permit holder will operate and maintain a flare gas recovery system to control continuous or routine combustion in the Flaring Device. Use of a flare gas recovery system on a flare obviates the need to continuously monitor and maintain records of hydrogen sulfide in the gas as otherwise required by 40 CFR Part 60.105(a)(4) and 60.7. However the determination of hydrogen sulfide in the gases directed to these flares, through lab data/engineering estimates, and maintenance of records of these determinations, is still required to demonstrate compliance with permit conditions (other than NSPS Subpart J) and MAERT limits under such conditions where hydrogen sulfide may be present in the flared gas stream.

Steam Methane Reformer Furnace Tube Replacement

71. The furnace tube replacement in steam methane reformer forty-one authorized by the amendment, PI-1 dated November 16, 2009, was determined not to be subject to major new source review by identifying projected actual emission rates for the facilities potentially affected by the project in Table A-3 entitled Unit 41 SMR Heater PSD Applicability and Demand Growth Exclusion, revised on March 18, 2010. Actual emissions from those facilities shall be monitored, recorded and reports made in accordance 30 TAC § 116.121 for the time period specified in 30 TAC § 116.121(b)(1). A copy of Table A-3 shall be attached to the permit kept on-site. **(04/10)**
72. The Gas-Oil Hydro Desulfurization Unit 42 Diesel Flexibility Modification project authorized by the amendment dated May 30, 2012 were determined not to be subject to major new source review by identifying projected actual emission rates for the facilities within the cap of 2, 563.30 tons per year of VOCs versus the past actual of emissions within the cap of 2,562.33 tons per year of VOCs. Actual emissions from those facilities shall be monitored, recorded and reports made in accordance Title 30 Texas Administrative Code § 116.127 (30 TAC § 116.127) for the time period specified in 30 TAC § 116.121(b)(1). **(06/12)**
73. NO_x and CO emissions from the Unit 40 Superheater (EPN 40H3) shall not exceed the following: **(04/16)**
- A. 0.025 lb NO_x/MMBtu on an hourly average and
 - B. 50 ppmvd CO corrected to 3 percent oxygen on an hourly average.

Delayed Coker Unit

74. Delayed Coking operations shall meet the following requirements:
- A. Only one drum at a time may be opened to the atmosphere to depressure, drain quench water and cut the coke out.
 - B. Coke drums shall not be opened to the atmosphere or drain quench water until the drum top pressure is less than 4 psig for 5 minutes and less than or equal to 2 psig for 5 minutes on a rolling 60 event average, with monitoring maintained and recorded in accordance with 40 CFR 63.657. Prior to completion of the coker vent improvement project the drum top

pressure prior to opening shall be less than 19.0 psig for 5 minutes and less than or equal to 15 psig for 5 minutes on a rolling 60 event average.

Drum venting, coke cutting and drum water handling emissions may be assumed equal to the limit in the Maximum Allowable Emission Rate Table if the drums are operated in compliance with this Special Condition, or calculated using the final methods represented in the permit amendment application, received on June 27, 2013. **(03/18)**

Date: August 24, 2018

Emission Sources - Maximum Allowable Emission Rates

Flexible Permit Numbers 9868A and PSDTX102M7

Emission Cap Table

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities, sources, and related activities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

Air Contaminants Data

Emission Point No. (1)	Source Name (2)	Air Contaminant Name (3)	Emission Rates	
			lbs/hour	TPY (4)
Emission Caps	See Attachment I for Source Name and Emission Point Number Index	NO _x	1225.76	2465.27
		SO ₂	6620.99	2967.21
		VOC	1681.08	3472.84
		CO	800.06	3483.78

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources, use area name or fugitive source name.
- (3) VOC - volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1
 NO_x - total oxides of nitrogen
 SO₂ - sulfur dioxide
 PM - total particulate matter, suspended in the atmosphere, including PM₁₀ and PM_{2.5}, as represented
 PM₁₀ - total particulate matter equal to or less than 10 microns in diameter, including PM_{2.5}, as represented
 PM_{2.5} - particulate matter equal to or less than 2.5 microns in diameter
 CO - carbon monoxide
 NH₃ - ammonia
 Cl₂ - chlorine
 H₂S - hydrogen sulfide
 HCl - hydrogen chloride
 HF - hydrogen fluoride
- (4) Compliance with annual emission limits (tons per year) is based on a 12 month rolling period.
- (5) Emission rate is an estimate and is enforceable through compliance with the applicable special condition(s) and permit application representations.
- (6) Interim rates are in effect until the Unit 34 Degassing System is installed and functioning, or until December 31, 2020. Final rates shall take effect after December 31, 2020.

Date: June 18, 2018

Attachment I

Contaminants, Emission Point Numbers, and Source Names

Flexible Permit Numbers 9868A and PSDTX102M7

This table lists the emission point numbers and source names by contaminant included in the Emission CAP limit in the maximum allowable emission rate table. Any proposed change to emission points included in the Emission CAP may require an application for a modification of the facilities covered by this permit.

<u>Contaminant (3)</u>	<u>Emission Point No. 0</u>	<u>Source Name (2)</u>

F-54-C21	Cooling Tower (Vacuum Unit)

HF Sources:

F-53-1	Refinery Loading Fugitives
F-53-2	South Loading Rack
F-66-1	Ref. Flare Area Fugitives
F-66-2	South Flare Fug
F-66-3	GOHDS/Cat Area Fugitives
F-68-1a	GOHDS Storage Fugitives
F-68-1e	E. Refinery Storage Fugitives
F-68-1n	N. Refinery Storage Fugitives
F-68-1r	Rocky Station Fugitives
F-68-1s	S. Refinery Storage Fugitives
F-68-1t	Taubman Yard Fugitives
F-68-1w	W. Refinery Storage Fugitives
F-68-2n	N. Coble Storage Fugitives

Contaminants, Emission Point Numbers, and Source Names

HF Sources:

F-68-2s	S. Coble Storage Fugitives
F-68-3	West Storage Fugitives
F-68-4t	JTF Fugitives
F-68-5	Gasoline Blending System
F-81	Refinery Boilers
F-82	South Boilers
F-85-2	Unit 40 Boiler Fugitives
F-22	HF Alkylation Fugitives

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3)
 - Cl₂ - chlorine
 - CO - carbon monoxide
 - HCl - hydrogen chloride
 - HF - hydrogen fluoride
 - H₂S - hydrogen sulfide
 - NH₃ - ammonia
 - NO_x - total oxides of nitrogen
 - PM - total particulate matter, suspended in the atmosphere, including PM10 and PM2.5, as represented
 - PM₁₀ - total particulate matter equal to or less than 10 microns in diameter, including PM2.5, as represented
 - PM_{2.5} - particulate matter equal to or less than 2.5 microns in diameter
 - SO₂ - sulfur dioxide
 - VOC - volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1

Dated: June 18, 2018
